# LILT

**The next generation of AI translation technology**

Lilt is the world's first language translation software that adapts to your content in real time using input from human linguists.

## A force multiplier for language translation

There is no software in existence that can match the accuracy of a skilled human translator. Recognizing that fact, Lilt developed and patented the best possible alternative: software that uses neural networks to learn from human translators in real time while they work.

This innovation enables translators to increase their output by 2-4x, expanding the volume of information available to decisionmakers and shortening turnaround times for end-users.

## Two Use Cases

### Verified Translation
For high-stakes documents requiring flawless translation accuracy, Lilt's human-in-the-loop AI assisted translation platform enables human translators to produce high-quality documents at unparalleled accuracy and speed. Throughout this process, the Lilt AI learns from the human translators, improving the process for all future documents.

### Instant Translation
Lilt Instant Translate uses the refined Lilt algorithms to conduct rapid bulk translation of documents or pasted free text--with or without a human linguist. Lilt Instant Translate operates at speeds of more than 450,000 words per minute, making it an ideal translation solution for large batches of documents.

# Closing Critical Language Gaps for U.S. National Security

Lilt harnesses neural machine translation technology to provide a secure, easy-to-deploy, and low-cost solution to the U.S. government and our Allies--even in air-gapped environments.

Lilt offers national-security critical languages such as Russian, Chinese, Persian/Farsi, Arabic, Hindi, Korean, Pashto, Indonesian, Ukrainian and Turkish. Our dedicated Government Solutions and Research teams work closely with our customers to help them achieve their mission objectives across regions and use cases.

## A solution designed for government missions

**AI–powered**
Embed AI and neural machine translation technology throughout your organization

**Sole source eligible**
Lilt is a Phase II SBIR company, expediting contracting and reducing time to field

**Highly secure**
Deploy across public cloud, private cloud, on-premise, and standalone devices--up to TS//SCI

**Software Connectivity**
Connect Lilt's robust API to trusted third-party software tools to provide expanded capability

# Results

**Increased Content Accuracy**

## 70%

reduction in translation errors

**Reduced Translation Timelines**

## 2-4x

translation throughput

**Reduced Ramp Times for New Linguists**

## 50%

reduction in time to attain operational proficiency
