BEINCOURT

Company Overview

What if we can eradicate the distractions and stressors related to courtroom telecommuting?

VIDEO AND AUDIO FEATURES

- Multiple camera shots of the courtroom with only one computer connection
- Clean Clear Audio at the right volume utilizing Dynamic Room Acoustic Modeling.
- Support Hybrid Virtual Courtroom hearings. Support for whoever is in or not in the courtroom
- Provisions for digital evidence presentation
- Innovative microphones that also provide station audio with ADA support

PLATFORM FEATURES

- Support for already purchased conferencing platforms such as WebEx, Zoom and Microsoft teams
- Cloud or on-premise solutions
- Small form factor 3U rack solutions

INTERPRETING FEATURES

- Simultaneous, Consecutive and a specialized Interpretation mode
- Interpreters and LEPs do not need to be in the courtroom for simultaneous interpretation
- ASL support for remote participants
- Support for multiple interpreters for longer hearings and trials
- Support for multiple LEPs

BEINCOURT® COMPANY OVERVIEW

No matter where you are, you can
BEINCOURT.

BEINCOURT simplifies the virtual court processes by improving collaboration, increasing the pace of hearings, and controlling costs.

Chances are, your courtroom has already invested in some level of virtual infrastructure but its limitations are all too apparent: mediocre audio quality, clumsy interfaces, and a lack of needed integrations.

The BEINCOURT platform was built by courtroom experts. It features private and judge sidebars, evidence camera integration, simultaneous interpretation, and more. Any person located anywhere in the courtroom, jail, or off premise can join the Courtroom proceeding and be heard with pristine audio with active built-in echo cancellation.

BEINCOURT works alongside your existing data and tech investment. Only our solution allows for a dedicated ESL/ASL audio and video channel, the dedicated interpretation channel to also be recorded, and a Juvenile to be blocked by all users except the Judge.

BENEFITS

Real benefits for the whole team.

Interpreters

Decreased Travel

Eliminating expensive, unnecessary travel allows interpreters to focus on their responsibilities by reducing distractions and stressors related to commuting.

Increased Productivity

The ability to work outside of local court means more time to dedicate to interpreting and additional opportunities.

Improved Technology

Through the guidance of the BEINCOURT team we will equip interpreters and their teams with state-of-the-art technology to eliminate the historic use of 2 devices for simultaneous interpretation and provide a single pane of glass for communication between all parties in the hearing.

Judges

Expedite Cases

BEINCOURT will allow the judges to adopt a technology that will give them the ability to catch up on court cases and retain new ones by having a platform that functions as if they were physically in court.

Provide Complete Control

By allowing all attendees in court to be "anywhere" to participate it is crucial that the Judge remains in complete control of their Courtroom environment. BEINCOURT will allow the Judge to have even more control by being able to mute/unmute participants, preview evidence before the jury sees it, etc...

Transform the Courtroom

BEINCOURT transforms the court recording environments with scalable, enterprise-level solutions that remove the burden of slow turnaround times associated with expensive, poorly integrated offline processes.

F.A.Q.

How do you address poor sound quality for in-person courtroom and virtual proceedings?

BEINCOURT provides state-of-the-art speakers and microphones that address echo cancellation and reverb in the Courtroom and virtual environments by eliminating the "acoustic pop" one can experience. Our technical team works hand in hand with you to determine the layout and design of your physical Courtroom to ensure that the AV requirements are understood so we propose the best-in-class solution that can work in and out of the Courtroom environment.

Can you help the courtroom transition from in person to virtual with your technology?

Yes. BEINCOURT is designed to provide pristine audio and video for courtrooms looking to modernize and handle court cases virtually. No position will be left behind as we provide a dedicated audio and video channel for each attendee. Our technology provides the option to use in court, in a hybrid fashion or 100% virtual. All deployment models can be handled (on premise, hosted, or cloud).

Do you provide recording for the audio in the meeting?

All of the audio that bleeds into the courtroom can be automatically recorded. The Judge sidebar is recorded as well. Typically, the Judge will pull the lawyers/council into a conversation. BEINCOURT does not supply recording, but we integrate with the chosen court recording tool.

Can you provide technology and support for high end trial courtrooms?

The BEINCOURT Complete or Essential Courtroom Package is equipped to provide the hardware and technology to support a high-end trial Courtroom environment. Please contact sales to learn more.
