## Designed to provide the warfighter with secure communications without compromise.

Sensitive military communications need complete security from both foreign and domestic cyber threats. Wickr recognizes those threats and provides uncompromising security for your collaboration needs whether your team is in the field, at the base, or back at home.

- ✓ Approved for use by the United States Air Force
- ✓ DoD ATO (IL4 CUI/PII)
- ✓ DoD Validated Secure Mobile App
- ✓ DoD Approved Data Center
- ✓ FIPS 140-2 Certified

Wickr, the self-hosted end-to-end encrypted collaboration platform designed for and accredited by the DoD, is the only collaboration service with full functionality to meet all security criteria of the National Security Agency (NSA). Further, the technology requires an Air Force Cloud One and Air Force Special Operations Command cloud certified fully managed service provider.

The application suite, built for secure communication and collaboration control and deployed to address the requirements to serve recall, alert, and messaging, includes servers that run in a DoD-approved cloud data center and client applications that run on government-issued, personal, and temporary computers and mobile devices with a DoD validated secure mobile application. Combined with its end-to-end encryption and zero trust infrastructure, Wickr ensures privacy for the Air Force, Navy, and Army in the harshest environments.

*"Government cloud secured Wickr applications enable secure mobile collaboration down at the tactical edge and higher to enable mission success. This fills major mobility collaboration gaps and there is no other DoD approved system at scale."*

**Todd Wieser**  
AFSOC Chief Technology Officer
