Southeast - Mike Davis - Director of Sales, SLED - michael.davis@saviynt.com

Central/West - Tom Boehmer - Director of Sales, SLED - tom.boehmer@saviynt.com

- **Company Overview**

Saviynt is transforming identity with the industry's #1 converged identity platform. Through our Enterprise Identity Cloud, Saviynt provides autonomous and adaptive identity security for employees, students, third parties, and machines. In 2015, we released the world's first IGA SaaS solution and since then, we've grown into a global organization scaling at breakneck speed to help organizations transform their identity programs and protect their people, assets, and infrastructure. For more information, please visit www.saviynt.com.

- **What solutions Saviynt provides**

Saviynt Enterprise Identity Cloud combines identity, privileged access, third party access, applications, and data access governance into a single cohesive platform. Unify controls and risk management for every identity, app, and cloud across your entire government IT landscape. Onboard people, apps, and machines in minutes and selectively turn on access and governance functionality, while delivering a frictionless digital experience for students, faculty and staff.

Simplify management and transform your security posture with five converged products:

- **Identity Governance.** Ensure users have seamless app and infrastructure access without compromising compliance.
- **Application Access Governance.** Stop cross-application access risks in their tracks.
- **Data Access Governance.** Control how your institution's most important asset – data – is accessed and shared.
- **Third-Party Access Governance.** Secure your third-party relationships at scale. Onboard, provision, monitor, audit, and remove time-bound relationships.
- **Privileged Access Management.** Eradicate standing privilege and establish governance from day one.

Anything else you would like to share

Saviynt understands that the future of higher education will be increasingly digital. To operate efficiently and manage risk effectively, IT and security leaders are being pressed to meet the challenges of digitizing student services, improving user experience and controlling costs.

Modernize legacy identity infrastructure. Saviynt cloud-native IGA delivers a seamless, identity-driven access experience by combining multiple identity management capabilities into a cohesive cloud platform. We work with universities all over the world who are looking to create a more agile, scalable identity management system.

Simplify identity governance, while improving user experience. Saviynt IGA delivers granular visibility and management of identities and their access across cloud, hybrid, and on-premise environments. Powered by a comprehensive identity warehouse and extensive controls, such as Duplicate Identity Management, identity management teams are able to support complex scenarios like student-staff personas and students accessing alumni networks.

Enable continuous compliance. Saviynt Enterprise Identity Cloud brings together IGA, Application GRC, and cloud Privileged Access Management. Saviynt provides industry's most comprehensive out-of-the-box continuous compliance controls library and cross-application Separation of Duties (SOD) risk rules for mission-critical applications such as SAP, Oracle Cloud ERP / EBS, MS Dynamics GP, PeopleSoft, and Workday.
