

## Data Velocity Delivered™

Complex infrastructure creates an App-Data Gap that disrupts data delivery, impacting critical business process. Closing the gap requires predicting and preventing all barriers to data velocity.

The Nimble Predictive Flash Platform closes the App-Data Gap by combining flash performance with InfoSight Predictive Analytics. Experience absolute performance, non-stop availability, and cloud-like agility at a 33-66% lower TCO.

## Absolute Performance That Scales

Accelerate every application across the enterprise. Seamlessly migrate applications across All Flash arrays and Adaptive Flash arrays to meet changing SLAs through the Unified Flash Fabric™.

- Achieve cloud-scale with up to 8PB of capacity and performance of 1.2M IOPS at sub-millisecond latency.
- Lower TCO by 33-66% and shrink data center footprint by 5X or more with advanced data reduction and intelligent flash media optimization.

## Non-Stop Availability

Designed for 6 '9's, with 99.9997% measured uptime across our entire installed base. This is made possible through InfoSight Predictive Analytics and "no-single-point-of-failure" hardware and software design.

Minimize IT time spent on support by having InfoSight automatically initiate nine out of ten support tickets with prescriptive resolution guidance.

Avoid downtime and reduce time to resolve complex problems by pinpointing application-to-data performance issues across the infrastructure stack.

## Cloud-Like Agility

Nimble combines effortless product operation, a transformed support process through InfoSight, Timeless Storage, and SmartStack integrated infrastructure to achieve cloud-like agility.

Timeless Storage is made up of three elements:

### Unwavering Customer Commitment

Built on trust, transparency, and legendary support, support, reflected in a Net Promoter Score (NPS) of 85.

### Timeless Guarantee

All-inclusive software licensing, flat support pricing for the life of the product and an option to receive a free controller upgrade after three years.

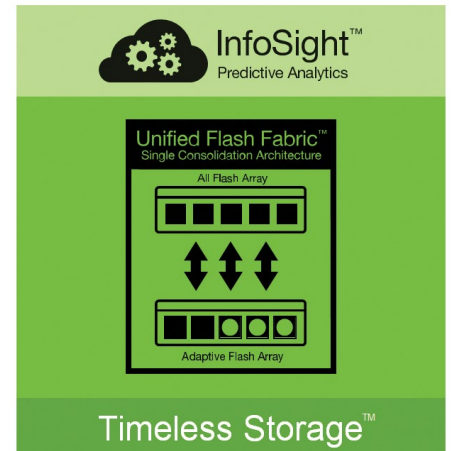

### Capex or Storage on Demand

The option to pay only for the storage you use at a fixed monthly price per GB, whether your usage goes up or down.

## Integrate Quickly into Your Ecosystem

SmartStack™ integrated infrastructure jointly developed by Cisco and Nimble Storage, provides Cisco® Validated Designs (CVDs) and reference architectures to streamline deployment and reduce risk. The Predictive Flash Platform has been validated with enterprise applications. Partnerships include Cisco, Microsoft, SAP, VMware, Oracle, Citrix, Commvault, Veeam, and Splunk.

## Predictive Flash Platform

The Predictive Flash Platform is made up of three components:

### InfoSight Predictive Analytics

Predict and prevent issues to avoid downtime across the infrastructure stack.

### Unified Flash Fabric

A single consolidation architecture spanning All Flash and Adaptive Flash arrays that delivers flash performance for every application.

### Timeless Storage

An innovative business model focused on cloud-like agility together with a commitment to customer success.
