

# Software Management with NinjaOne

## NinjaOne & Software Management Datasheet

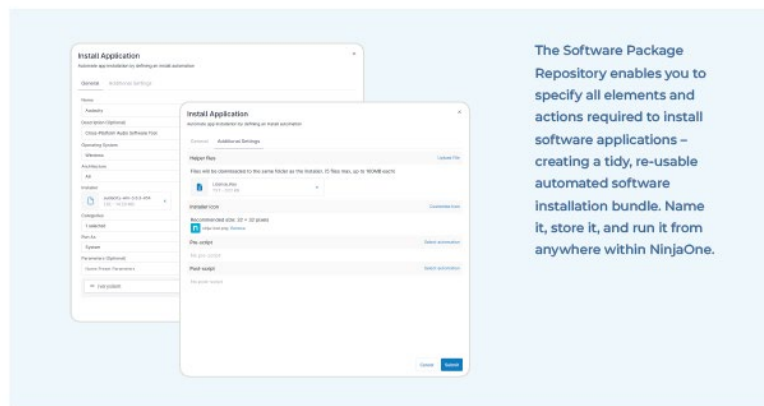

### Software Management with NinjaOne

Deploy, patch, and manage software across all your managed endpoints easily and automatically.

Whether you're setting up new devices, applying patches to existing devices, or installing or uninstalling software for an entire organization, NinjaOne makes it fast and easy to manage software on all your devices individually or automatically and at scale. As an agent-based solution, no connection to the company network or VPN is required.

- **Deploy:** Deploy any software across any managed endpoint
- **Patch:** Patch over 200 third-party applications on Windows, Mac, and Linux devices
- **Uninstall:** Silently uninstall applications with one click
- **Inventory:** See a complete software inventory updated in real-time
- **Monitor:** Monitor software installations and alert on unsupported installs

The Software Package Repository enables you to specify all elements and actions required to install software applications – creating a tidy, re-usable automated software installation bundle. Name it, store it, and run it from anywhere within NinjaOne.

# Software Management with NinjaOne

Deploy, patch, and manage software across all your managed endpoints easily and automatically.

Whether you're setting up new devices, applying patches to existing devices, or installing or uninstalling software for an entire organization, NinjaOne makes it fast and easy to manage software on all your devices individually or automatically and at scale. As an agent-based solution, no connection to the company network or VPN is required.

- **Deploy:** Deploy any software across any managed endpoint
- **Patch:** Patch over 200 third-party applications on Windows, Mac, and Linux devices
- **Uninstall:** Silently uninstall applications with one click
- **Inventory:** See a complete software inventory updated in real-time
- **Monitor:** Monitor software installations and alert on unsupported installs

The Software Package Repository enables you to specify all elements and actions required to install software applications – creating a tidy, re-usable automated software installation bundle. Name it, store it, and run it from anywhere within NinjaOne.

### Multi-OS Support

NinjaOne allows you to deploy, patch, and manage software across Windows, macOS, and Linux endpoints.

### Any device, anywhere

Manage software on any device with an internet connection. No need to connect to the company network or use a VPN.

### Patch automatically

NinjaOne automates patching for over 200 third party software applications. Create custom packages to update additional software titles.

### Software repository

Create custom software installation packages – even for multi-step, complex installations – and store them in NinjaOne for easy, reusable software deployment.

### Software monitoring

Monitor your software inventory to automatically deploy missing applications or alert on unsupported software installations.

### Mass deploy with ease

Filter devices based on any type, location, organization, or more to deploy software to one or one thousand endpoints at the click of a button.

### Schedule deployments

Choose which applications go to which endpoints, or should be patched at what time intervals, through fully customizable deployment schedules.

### Policy-based management

Centralize and standardize how devices are managed with hierarchical policy-based management in NinjaOne.

### Ad hoc deployment

Should a user need an application installed right away, any installation workflow can be run ad hoc for rapid response.

## Why NinjaOne?

Over 10,000 MSP and IT department organizations trust NinjaOne to provide centralized visibility and control over all devices helping them monitor, manage, and secure their endpoints at scale.
