

Site Visibility for Government

Site Visibility is an AI video-based safety solution that helps government agencies protect their communities in real-time, ensure citizen and employee safety, and improve incident response time.

From the smallest municipalities to the largest state governments, Samsara offers advanced technology and tools to proactively alert on unusual activity, streamline incident investigation, and centralize data in a cloud-based dashboard.

Real-time visibility

Remotely monitor dispersed locations or restricted areas for citizen disturbances, theft, illegal dumping, or even track mulch levels for optimized dispatching.

Immediate incident response

Review footage from anywhere in the cloud-based dashboard or mobile application. Intelligently search for unusual activity and seamlessly share with safety officers or law enforcement.

Community and employee safety

Establish a safe community and easily coach employees on safe practices. AI-detections can alert on unauthorized entries and footage can easily be saved for ongoing employee training.

Operational efficiency

Deploy in minutes and simplify change management with a customizable dashboard and a robust training center to reduce downtime and quickly deliver citizen services.

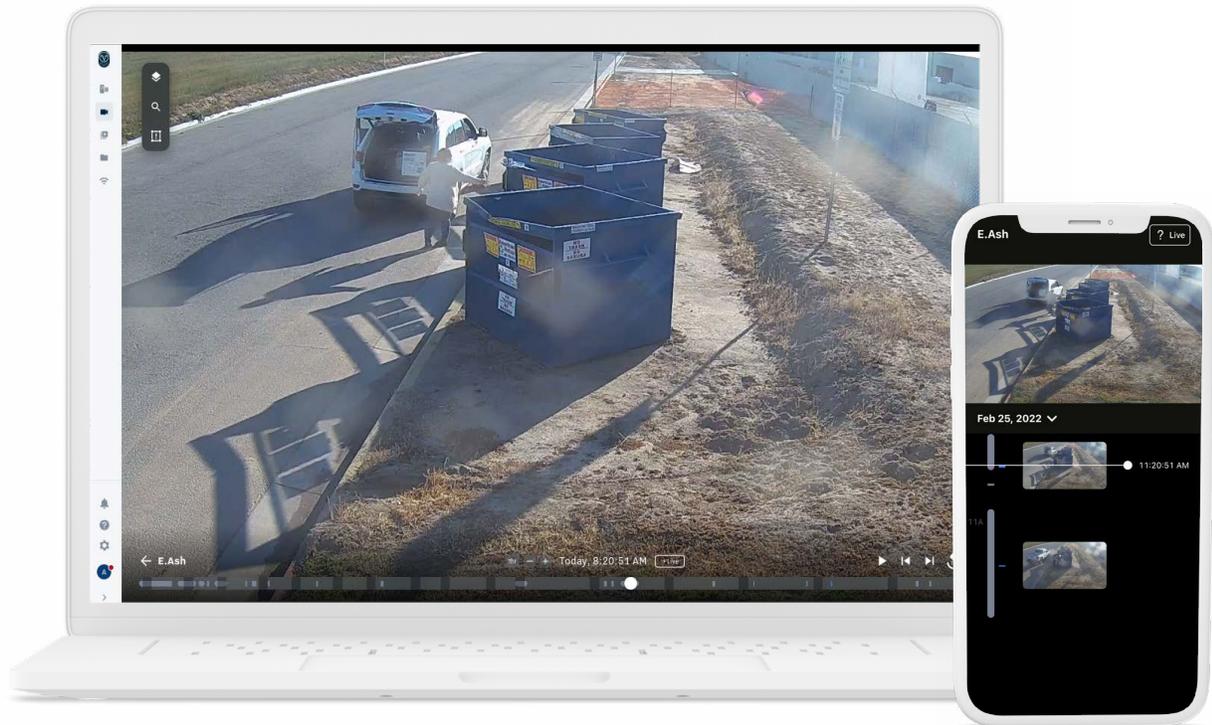

“Samsara Site Visibility helps us get back staff time so we can focus on efficiency and service.”

IT Manager, County of Santa Barbara

Consolidate third-party camera streams in one cloud dashboard

The Site Gateway intelligently identifies in-network cameras and overlays powerful AI on top of existing, third-party IP cameras. This allows users to access and manage all of their video streams across locations, and even from multiple vendors, in one cloud-based dashboard and avoid the time consuming and costly process of rip and replacing existing camera infrastructure.

Platform Benefits

Streamlined Investigation—spend less time investigating using AI-driven search tools and easy video retrieval.

Proactive Alerts—be immediately notified of unsafe activity through intelligent detections and alerts.

Easy Sharing—export footage directly to your desktop, copy a link to share via email or SMS, or save segments indefinitely to your cloud library.

Secure Cloud Access—define who can access your footage through roles, permissions, and SAML SSO.

Flexible Video Retention—30+ day customizable NVR video storage and downloadable cloud footage.

Intuitive Device Management—be alerted in real-time if a gateway or camera is disconnected or offline to immediately troubleshoot.
