

Cribl: Take Control of your Observability Data

A vendor agnostic data collection, reduction, routing & enrichment platform for observability data in real time. Allows you to implement an observability pipeline to parse, restructure, and enrich data in flight :

*** Gain choice and control over your data**

- Route data where it has the most value. Mask and control access to sensitive data.

*** Enrich and normalize telemetry data for a quicker response to cyber attacks**

- Provide greater context to save time and enable a deeper, more actionable response from your security and observability tools.

*** SIEM Optimization**

- Cribl helps you maximize your current IT tooling without vendor lock-in. Route to multiple destinations and maintain full fidelity data in inexpensive object storage; replay it any time for future analysis.

*** Eliminate tool and vendor lock-in**

- Choose the best vendor tool(s) without requiring new agents or collectors.
