D2 | CYBERSECURITY

Learn to Identify Cyber Attacks with the SAFE Program

With the growing number of online systems available to educators for storing and accessing personal data of employees, students, and parents, school districts have become a prime target for hackers and cybercriminals. Did you know that in 2017 the education sector accounted for 13% of data breaches in the US, up 164% from 2016? And, in 2018, ranked last in terms of cybersecurity performance when compared to other major industries?

To help provide the foundational knowledge needed to mitigate and prevent cyberattacks, D2 Cybersecurity has created the Security Awareness for Educators (SAFE) program. SAFE is the only comprehensive cybersecurity training program developed specifically for the K-12 education sector. Our solution is designed to provide ongoing learning, training, and communication around cybersecurity awareness to users of school networks and systems, while supporting existing IT processes and personnel. We combine online modules with simulated phishing campaigns to create a comprehensive package that improves cyber culture awareness for administrators, teachers, students, and parents within schools across the country.

We utilize our **Analyze, Educate, Train, Communicate (AETC)** process to evaluate your current cybersecurity practices and user behaviors to provide a total solution specific to your unique needs and requirements.

D2's SAFE program provides schools with critical awareness education as an essential first step in reinforcing cyber policies and guidelines while increasing vigilance towards future cyber threats.

The following concepts are covered in short, compact learning modules to promote retention and modify behaviors:

- Web Browsing Safety
- Phishing & E-mail Attacks
- Ransomware
- Identity Theft
- Password Essentials
- Data Security

- Mobile Security
- Public Wi-Fi
- Insider Threats
- Office Security
- Acceptable Use Policy
- Social Engineering

The SAFE Advantage:

- Customized training URL
- Personalized Learning Management System
- Community Threat Sharing
- Targeted Phishing Campaigns
- Regular Courseware Updates
- On-Demand Reporting
- Concierge Support Service and Effortless Implementation

NJSBA TEC

D2 is proud to offer our Cybersecurity Awareness Training through the NJSBA TEC COOP

Contract Info

NAME: NJSBA Contract
Number: E-8801-ACESCPS
Expiration: Through October 20, 2020
