GRIDLIGHT WORK • PRIVATE AI ON YOUR HARDWARE

AI for the work you've been keeping from AI.

Every firm has documents nobody will paste into a chatbot — the deal memo, the client file, the board pack, the audit trail. Gridlight Work reads them where they already sit, inside your walls, and hands back the finished document. **Nothing is uploaded. Nothing is metered. Nothing stops halfway.**

47%

of people using generative AI at work still run it through personal apps.

NETSKOPE • JAN 2026

\$670K

added to the average breach cost where shadow AI use runs heavy.

IBM • JUL 2025

Your people already use AI on company data. The only question is whose servers it runs on.

What would you like to get done?

Describe the job in your own words. Attach the files it should work from, and you'll be asked before anything leaves this machine.

Draft a report

Turn scattered notes into a document I can send on.

Make a hero image

Generate options from a description, then refine one.

Ask about a file

Attach a PDF, Word or Excel file and ask what's in it.

01 • CONTAINMENT

Your files never take a trip

Read, indexed and written on the hardware they already live on. No vendor in the data path — nothing to redact first, no procurement review to wait on.

02 • ENDURANCE

No meter. No cutoff.

No usage caps, no context window closing mid-analysis. A 300-page review or a forty-file reconciliation runs first word to last — the model is yours.

03 • CUSTODY

You hold the record

The conversation lives with you. Keep what matters, delete sensitive material for good, or wall off a matter so nothing bleeds across.

THE TRADE-OFF

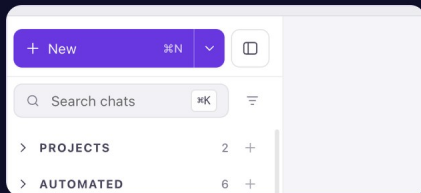

The old bargain, retired

Cloud assistants offer a deal: hand over the document, then live inside their limits. When the model runs where the data does, the deal goes away.

	CLOUD ASSISTANTS	GRIDLIGHT WORK
Your files	Shipped to a vendor's servers before a single page can be read.	Read and written on this machine. Nothing is transmitted.
Long jobs	Usage limits and context resets stall the work — and you explain it all again.	No token ceiling, no resets. Big jobs finish in one pass.
The record	Your history sits on their servers, out of reach to prune or isolate.	Keep it, isolate it, or delete it for good. Your call.
Sensitive work	Legal, client and regulated material sits out — or waits on procurement.	Goes first. The data never left the building.

HOW TEAMS USE IT

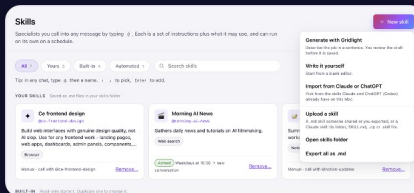

Built for how work actually gets done

PROJECTS

One matter, one folder

Each project is fenced to its own directory. It works inside that folder and nowhere else on the machine.

SKILLS

Your best process, bottled

Capture how your sharpest person does a job once. Anyone can run it — or put it on a schedule.

CONNECTIONS

Reach out, don't let in

Pull in outside data over MCP when you choose to — without opening your own systems to anyone.

Bring the file you'd never upload.

One folder, one real task — the confidential one. You leave the meeting with the finished document, and network logs that show nothing went out.
