

Satisfying Cal-Secure with Converged Endpoint Management

How Tanium's single platform can help you meet more than half of the technology capabilities in the Cal-Secure plan.

What is Cal-Secure?

Cal-Secure is a five-year roadmap for California departments to mature their information security practices so they can deliver digital services more effectively and securely.

The plan partially focuses on improving security posture and governance to enhance defenses in the face of rising information security risk.

Cal-Secure has directives for each California department across three categories: people, process and technology.

With the thousands of cybersecurity vendors on the market, it can be tough to know where to start – especially when organizations are often already using multiple tools to manage their information security practices.

Security tool proliferation can lead to a bigger attack surface

When it comes to technology, California departments are no stranger to the tool proliferation that cyber criminals take advantage of every day. And point tools aimed at anything from patching to software management to threat hunting can multiply quickly. This leads to unpatched systems, lack of a single source of truth for security data, and management challenges that burden department resources.

Without the budget, people or access to modern technology that can bridge the gap, it can be tough to reduce an organization's attack surface. That's why it's important to eliminate point tools used for security management in favor of a platform approach.

How Tanium can help

Tanium's Converged Endpoint Management platform was built to address federated information security operations across teams, at scale, with accuracy and through a single source of truth for security data. Tanium's California State customers are using the platform approach to answer important questions such as:

- How much money are we spending on unused licenses?
- How many patches were actually deployed?
- What is our risk profile?

Without quick and accurate answers to these questions, organizations are left in the dark in the event of a major breach – leaving constituent data, reputation and security maturity at risk.

You can't protect what you can't see

Visibility - Know Everything Now

See into every endpoint, managed or unmanaged, with complete, accurate and real-time visibility.

Control - Take Control

Whether in the cloud or on premises, take control of your entire IT estate in seconds with minimal network impact.

Trust - Align team

With a single source of truth, align your teams with complete, high-fidelity data across your entire environment.

Tanium's Converged Endpoint Management platform gives your team an integrated view of all endpoint data and a common taxonomy so you can reduce risk and reach information security maturity.

Tanium for Cal-Secure

There are many technical capabilities included in the Cal-Secure plan that span technology and process. With Tanium, you can satisfy more than half of the technological requirements. Using a single agent, IT teams can get accurate and real-time answers about their information security estate, from across their organization in minutes. And with the flexibility of the Tanium platform, California departments can start with just two solution areas, and add on over time to satisfy future requirements.

Cal-Secure technology requirements met or enhanced (*) by Tanium

- Anti-Malware Protection
- Continuous Vulnerability Management
- Asset Management
- Incident Response
- Continuous Patch Management
- Security Continuous Monitoring (24 x 7)
- Cloud Security Monitoring
- Application Whitelisting
- Insider Threat Detection
- Enterprise Encryption
- Unified Integrated Risk Management
- Threat Intelligence Platform
- Privileged Access Management*
- Data Loss Prevention*
- Disaster Recovery*

With Tanium, State of California departments can not only satisfy many of Cal-Secure's technical requirements, but due to an extensive history of partnering with government departments across the country, Tanium can also guide your organization on the governance process. And, with a proven support model that comes with dedicated resources, templates and workflow charts, you can be more confident in achieving your cybersecurity goals.

To learn more about how Tanium's Converged Endpoint Management platform can support endpoint management for states, visit www.tanium.com/solutions/state-and-local-government.

Tanium is the platform that over half the Fortune 100, numerous government organizations and the U.S. Armed Forces trust to gain visibility and control across all endpoints. Our approach gives IT operations, security and risk teams confidence to manage, secure and protect their networks at scale. See and control every endpoint, everywhere. That's power of certainty.
