BEN HOLLIFIELD

CO-FOUNDER

MORE ABOUT BEN

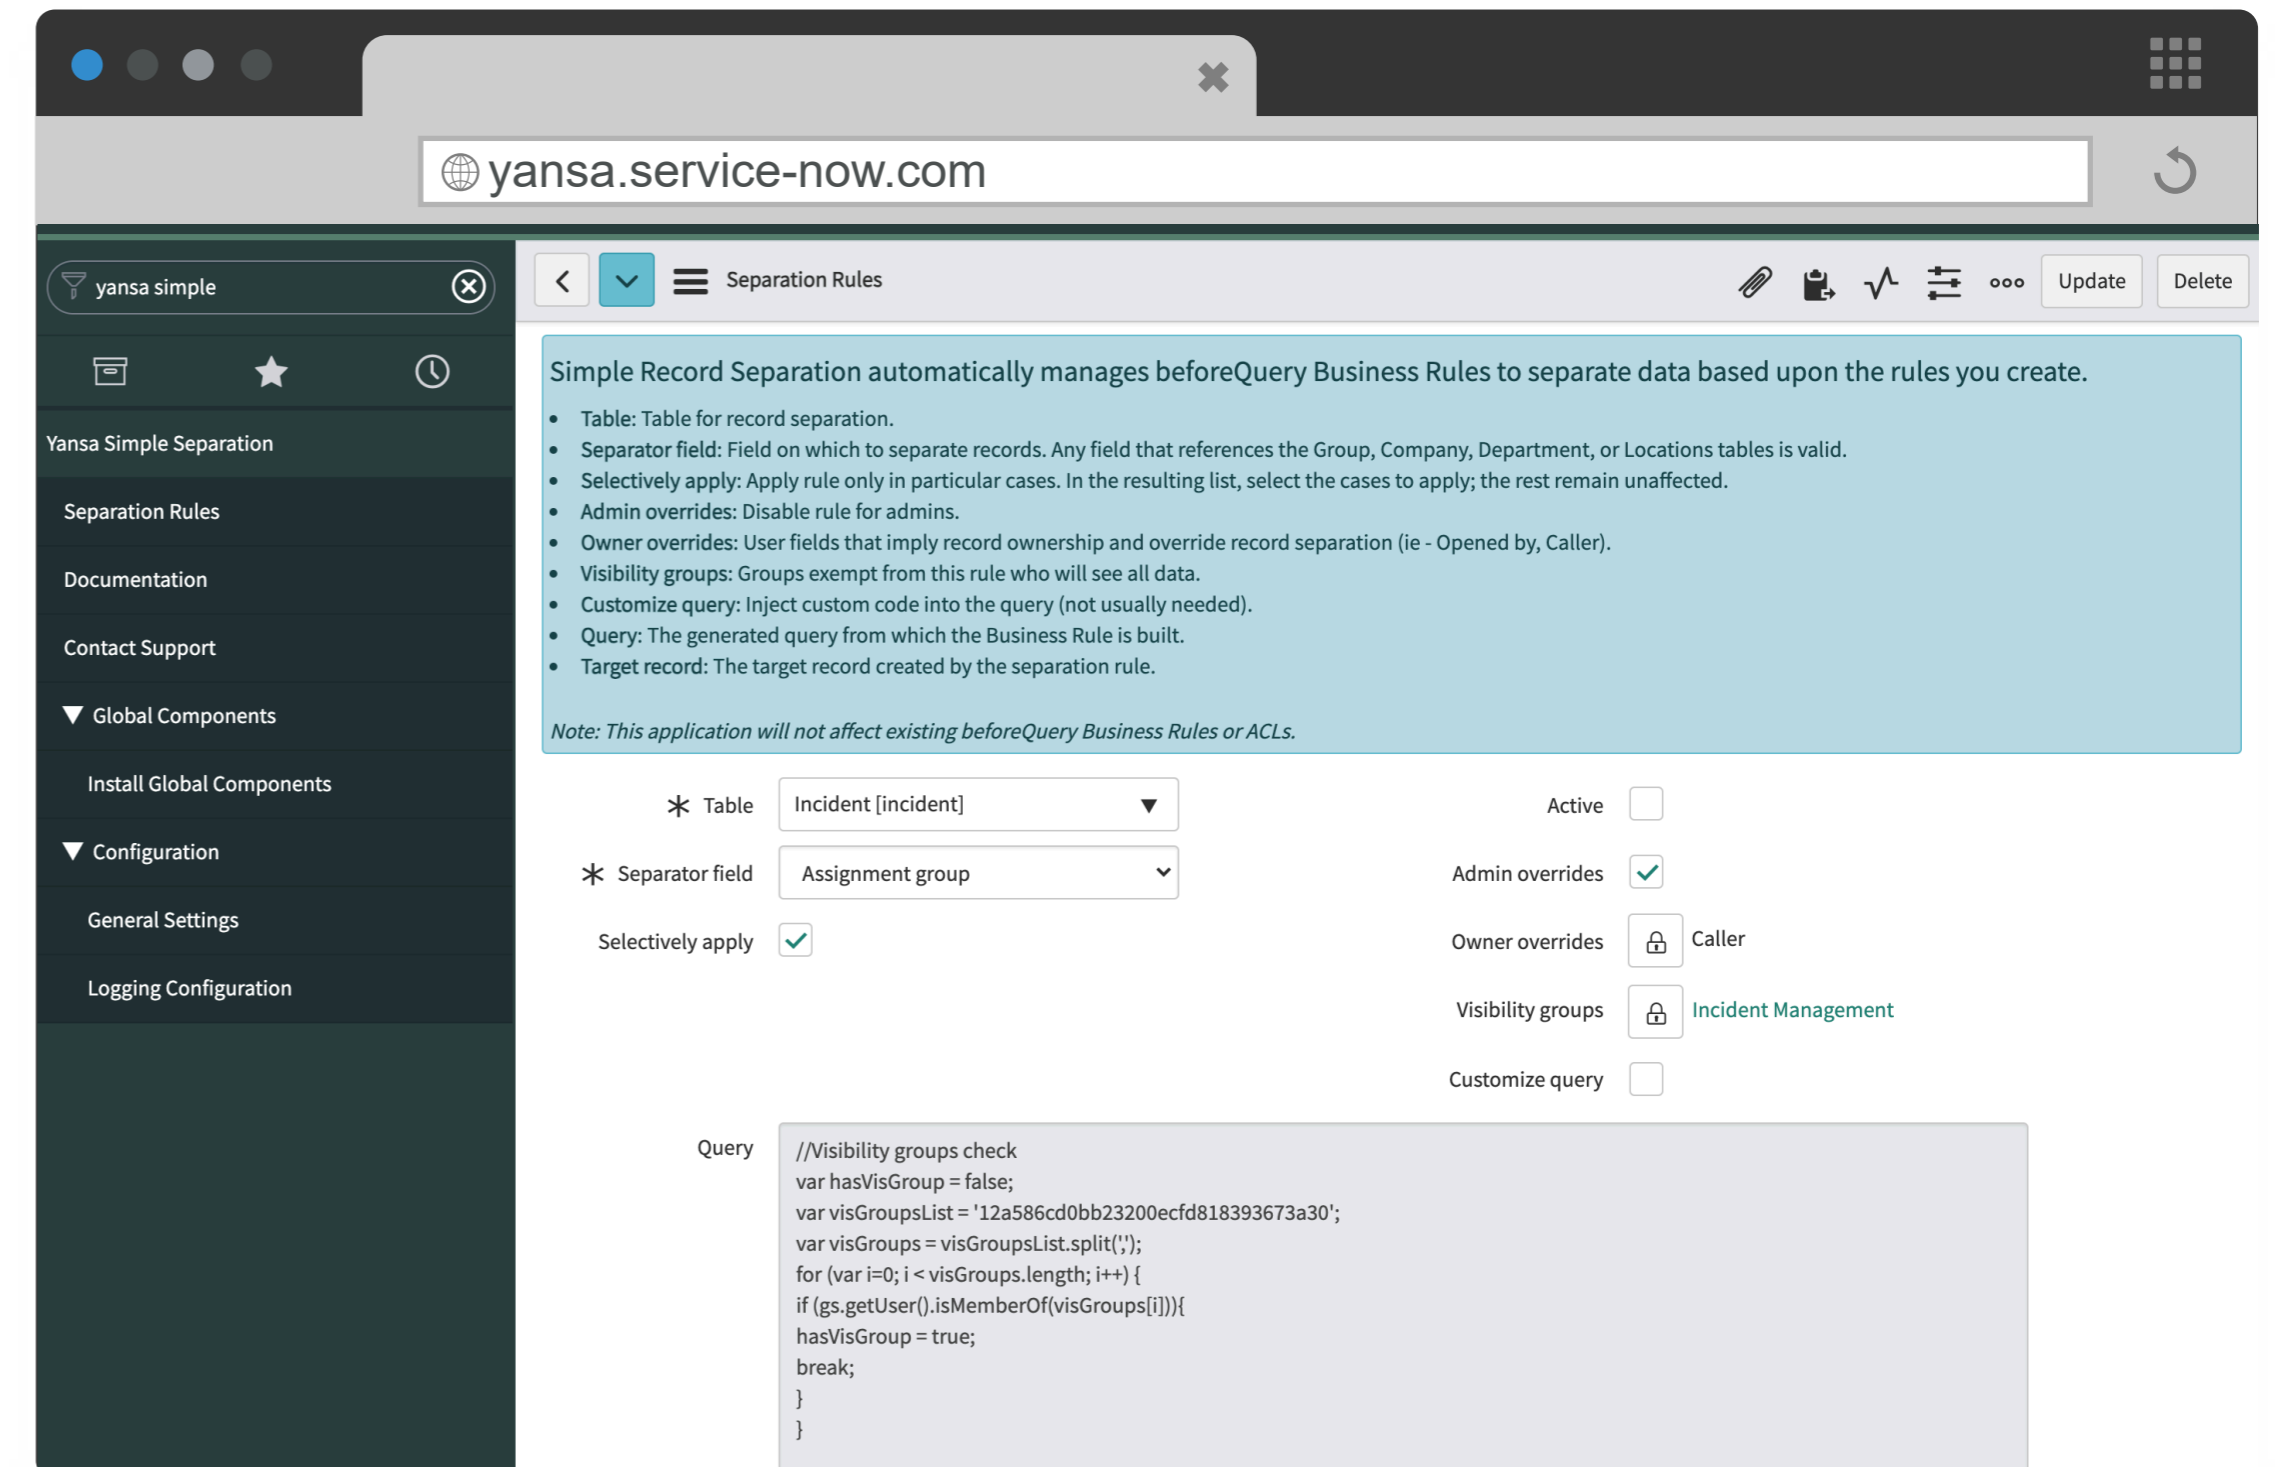

- Started at ServiceNow in 2012
- Co-Founded Yansa Labs in 2017
- Responsible for:
 - Over 70 Applications on ServiceNow Share
 - Dozens of ServiceNow Deployments
 - Dozens of Certified ServiceNow Applications

Yansa Simple Data Separation

Separate & Secure data based on point-and-click creation of Separation Rules

- 1 Record separation can occur on any table, with different rules per table
- 2 Users only see records for their Company, Groups, Department, or Location
- 3 May be selectively applied to specific Companies, Groups, Departments, or Locations
- 4 May be overridden based on record ownership, 'Visibility Group' membership, or admin permissions
- 5 Highly customizable

Yansa Simple Data Separation

Uses Include:

Incident

Selectively segregate Incidents so that only their assignment group can see them

HR/Legal/Finance

Secure sensitive HR, Legal or Finance data so that only the appropriate groups have visibility

Compliance

Allowing overarching visibility to select groups for oversight & compliance

Yansa Simple Data Separation

MORE EFFICIENT THAN ACCESS CONTROLS

Separation occurs via query injection, minimizing database load and maximizing efficiency.

EASIER THAN DOMAIN SEPARATION

Requires no specialized expertise, Domain Separation licensing, or increased maintenance burden.

QUICK & EASY TO MAINTAIN

Rules are simple to create, activate, deactivate, and update.

The screenshot shows the Yansa Simple Data Separation configuration page in a browser. The browser address bar shows `yansa.service-now.com`. The page title is "Separation Rules". The left sidebar contains navigation links: "Yansa Simple Separation", "Separation Rules", "Documentation", "Contact Support", "Global Components", "Install Global Components", "Configuration", "General Settings", and "Logging Configuration". The main content area displays a configuration form for a "Simple Record Separation" rule. The form includes the following fields and options:

- Table:** Incident [incident]
- Separator field:** Assignment group
- Selectively apply:**
- Active:**
- Admin overrides:**
- Owner overrides:** Caller
- Visibility groups:** Incident Management
- Customize query:**

The "Query" field contains the following code:

```
//Visibility groups check
var hasVisGroup = false;
var visGroupsList = '12a586cd0bb23200ecfd818393673a30';
var visGroups = visGroupsList.split(",");
for (var i=0; i < visGroups.length; i++) {
  if (gs.getUser().isMemberOf(visGroups[i])){
    hasVisGroup = true;
    break;
  }
}
```

Below the form, there is a note: "Note: This application will not affect existing beforeQuery Business Rules or ACLs."

Live Demo

A wide-angle landscape photograph of a mountain range. The foreground shows a dark, forested ridge. In the middle ground, a valley opens up with a winding river and some small settlements. The background features a series of jagged mountain peaks under a clear blue sky with a few wispy clouds. The overall lighting is soft, suggesting either dawn or dusk.
