

CLOUD MANAGER

Multi-Cloud Discovery, Management, Optimisation
and Savings through Automation

kumoco

ADDITIONAL FEATURES V5.0 RELEASE

New Portal Interface

Key information is presented on an easy and quick to understand dashboard, letting you know what your top priority actions are.

Google Cloud Platform – New Resources Supported

To help manage your GCP accounts, Kumoco Cloud Manager now explores IaaS resources and a variety of SaaS/PaaS type resources:

- Kubernetes
- BigQuery
- CloudRun
- DataFlow
- Spanner

Provides usage analysis and recommendations to reduce costs.

Azure Virtual Machines: Automated Scheduling, End of Lease Termination, and Custom Script Execution

- Managed centrally through Kumoco Cloud Manager, on/off schedules for Azure Virtual Machines can be set for individual and groups of resources, including existing virtual machines.
- Standard schedules can be configured and enforced, ensuring cost-effective policies are applied and maintained.
- Automatic 'end of lease' termination allowing you to set an end-of-life date for a virtual machine.
- The resource owner will then be notified in advance and have the opportunity to request an extension or simply let the resource be terminated at the scheduled time.
- You can now remotely send and execute scripts to virtual machines directly from Kumoco Cloud Manager.

Azure CSP and Non-Enterprise Billing

KCM now supports all Azure account types:

- Enterprise Agreement, CSP, and Non-Enterprise (standard).
- With complete support for Azure billing data, MSPs can provide cost visibility to their CSP customers, as well as combine and/or allocate costs from Enterprise Agreement and/or reseller accounts.

Automated Cloud Account Setup

Automated all the setup and configuration actions when adding a new cloud account, saving human effort time and getting your account up and running in the same day.

CLOUD MANAGER

Multi-Cloud Discovery, Management, Optimisation
and Savings through Automation

kumoco

ADDITIONAL FEATURES V5.0 RELEASE

Enhanced Universal Tag Management

Apply tags based on logic at any level, including groups of cloud accounts and resource types.

Dashboards & Reports

- Dozens of standard reports have been packaged into Kumoco Cloud Manager and are ready to use without any additional configuration or setup to use them.
- Interactive filters have been added to most dashboards, benefitting your already-configured cost allocations.

Forecast Expense Lines & Projections

- Updated automatically each day when cost data is retrieved, you can explore projected future spend based on previous spending trends in the breakdowns and allocations that define your organisation.
- Increased knowledge of projected spend with updated forecasts every day, including alerts if the forecast is going to exceed set budget limits.

Domain Separation Support

- Kumoco Cloud Manager now runs on domain separated environments.
- Meeting all the requirements defined by ServiceNow for domain separation, Kumoco Cloud Manager can be installed, configured, and operated in domain separation environments.
- Ensures platform-level security to all our MSP-focused features and functionality.
- Kumoco Cloud Manager now also offers the option to turn on our 'Data Segregation', ensuring every database call from KCM through ACLs according to required security structure.

Performance Enhancements

- Faster processing and loading of data from cloud accounts, and distribution of processing jobs.
- These improvements leverage capabilities at the ServiceNow platform level such as managing:
- Transaction queues and limits, worker allocation, and MID Server utilisation.
- Pre-calculated and prepared views are providing faster load time.
- Times for pages with large data sets have improved from minutes to a few seconds.
