

Ransomware Threats are Real
Take control with Veritas Backup Exec

65% Data security is under constant, and unprecedented, threat levels. Two-thirds of organizations have been hit by a successful ransomware attack in the last three years.

BE Simple
Simple, Secure and Unified

Take Control of Your Data
Taking a proactive approach to prevent through layered security solutions is smart, but only one thing can guarantee protection if attackers get in—having a reliable backup system. With Veritas Backup Exec, all your critical data, virtual, physical, and cloud workloads can be backed up, locked down against ransomware, checked for malware and anomalies, and recovered quickly and easily.

- Air Gap Backups**: Create an offline backup copy of your data to keep it safe from ransomware.
- Multiple Copies**: Store multiple of backup images in different locations to reduce the attacker's ability to gain access.
- RBAC**: Restrict system access to authorized users and define roles and permissions with one-based access control.
- Shrink Your RPO**: Raising backups more often to drive your RPO can reduce potential data loss to hours or even minutes.
- Secure Your Backups**: Secure your backups from encryption, deletion, or modification from outside sources.
- Detect Anomalies**: Monitor backup data for changes in the job meta data to flag potential threats.
- Scan for Malware**: Scan backup jobs prior to recovery for another line of defense against undesirable data propagation in the environment.

Ransomware Threats are Real

Take control with Veritas Backup Exec

Simple, Secure and Unified

We continue to see a rise in attacks on businesses, government organizations, and public services—large and small, across the globe. They've caused gas shortages, disrupted healthcare systems, closed grocery stores, shut down schools, and halted manufacturing.

Data security is under constant, and unprecedented, threat levels.

Two-thirds of organizations have been hit by a successful ransomware attack in the last two years.

Take Control of Your Data

Taking a proactive approach to prevention through layered security solutions is smart, but only one thing can guarantee protection if attackers get in—having a reliable backup system. With Veritas Backup Exec, all your critical data (virtual, physical, and cloud workloads) can be backed up, locked down against ransomware, checked for malware and anomalies, and recovered quickly and easily.

Air Gap Backups

Create an offline backup copy of your data to keep it out of reach.

Multiple Copies

Store copies of backup images in different locations to reduce the attacker's ability to gain access.

RBAC

Restrict system access to authorized users and define roles and permissions with role-based access control.

Shrink Your RPO

Running backups more often to shrink your RPO can reduce potential data loss to hours or even minutes.

Secure Your Backups

Secure your backups from encryption, deletion, or modification from outside sources.

Detect Anomalies

Monitor backup data for changes in the job meta data to flag potential threats

Scan for Malware

Scan backup sets prior to recovery for another line of defense against undesirable data propagation in the environment.
