

Okta for Government

User Identity and Access Management:
A Bridge to Government IT Modernization

okta

Okta has an official certified status with the Federal Risk Authorization Management Program (FedRAMP) Moderate authority to operate (ATO).

Government agencies face unique cybersecurity challenges in today's world, including a large legacy information technology base, processes not built for the digital age and a prohibitive legislative budgeting cycle.

Meanwhile, as security vulnerabilities proliferate, citizens, employees and contractors face access and usability challenges when trying to navigate the multiple systems required to get to public services and entitlements, or to simply do their jobs.

Okta, being FedRamp certified, is uniquely poised to relieve much of this burden for government agencies at all levels.

How does Okta help governments around the world serve citizens better?

Accelerate Digital Transformation

Speed up your digital and cloud programs by setting up identity once and for all. Okta is designed to connect any employee, vendor, partner, or citizen to anything with security that doesn't sacrifice ease of use, and easily inter-operates with the tools you already have in place.

Fast and Secure Inter-agency Collaboration

Okta makes it easy to manage access for external collaborators to any resource, on-prem or in the cloud. Whether you need to connect to an entire agency or an individual, Okta offers flexible secure options that make collaboration easy and scalable.

Secure and Convenient Citizen Access to Government Services

Online self-service makes government run more efficiently. Whether you're building a new citizen-facing portal or unifying a constellation of existing services Okta makes web and mobile access secure, compliant, and frictionless.

IT Cost Reduction

Delivered 100% as a service, Okta eliminates the unnecessary maintenance, operations and security costs of on-prem IAM.

From security features to app access, Okta is helping the FCC bring it all together

6x 15 2,500

less expensive than existing on-demand infrastructure

apps

users

Where Okta came in for the FCC specifically was at a reasonable cost. It gave us the ability to offload some of the identity management problems we had, and to scale seamlessly as we move more and more services onto cloud platforms.

–Dustin Laun
#ChangeAgent, Consultant + Sr. Strategy Advisor working with the FCC

Okta helps state, local, and federal government agencies all over the world do more

Okta IT Products

Universal Directory
Deploy a flexible, cloud-based user store to customize, organize, and manage any set of user attributes.

Single Sign-On
Free your people from password chains. A single set of credentials gives them access to enterprise apps in the cloud, on-prem, and on mobile devices.

Lifecycle Management
Automate user onboarding and offboarding with seamless communication between directories and cloud applications.

MFA
Secure your apps and VPN with a robust policy framework, a comprehensive set of modern second-verification factors, and adaptive, risk-based authentication that integrates with all of your apps and infrastructure.

Mobility Management
Use a mobility management system that puts user identities at the center, securing mobile access while ensuring top-shelf user experience.
