Enhancing Microsoft Copilot for Security with Tanium

A Tanium + Microsoft Webinar
July 16, 2024

CHALLENGES

In today's dynamic cybersecurity landscape, colleges and IT leaders face the daunting task of protecting expansive and diverse networks from sophisticated threats. Integrating Tanium with Microsoft Copilot for Security addresses key challenges like fragmented data sources and a lack of real-time visibility. By providing a unified platform, Tanium ensures security teams have up-to-date information without complex VPN setups or reliance on Active Directory, streamlining incident response.

INTEGRATION AND CAPABILITIES

This partnership between Tanium and Microsoft focuses on enhancing the capabilities of Microsoft Copilot for Security. Tanium's real-time data and endpoint management capabilities feed directly into Microsoft's security stack, including Sentinel and Intune. This allows for immediate action on identified threats and simplifies the deployment and management of security measures across various environments. Tanium's robust plug-in architecture enables seamless integration with Microsoft's tools, providing enriched insights and automation possibilities for security analysts.

DEMO INSIGHTS

The demo included in this webinar highlighted Tanium's integration with Microsoft Copilot for Security, showcasing features like natural language queries, automated response playbooks, and real-time device health checks. These capabilities improve threat detection and response while making advanced security tools accessible to all analysts.

FEATURED SPEAKERS

Doug Thompson
Director, Solution Engineering / Chief Education Architect, Tanium

Corey Lee
Security CTO | Education, Microsoft
