Hybrid Cloud Gives the Public Sector Choice

**Benefits**
- **Infrastructure consolidation:** Workload virtualization

**Why Red Hat?**
- **Shift the Focus:** Open source environment, orchestrate and automate operations, secure service continuity, and modernize IT infrastructure.

**Cloud Concerns**
- Secure code and contributor transparency for better security
- Ensure IT platform costs are 38% lower
- Improve application portability for freedom of movement
- Accelerate delivery, reduce complexity, and scale without limits

**OPEN SOURCE:** Build infrastructure flexibility, speed innovation, reduce costs, and eliminate vendor lock-in.

---

**Containers and Kubernetes:** Reduce manual processes, accelerate service delivery, increase mission agility, modernize IT architecture.

**Cloud Native Computing Foundation (CNCF):** Fostering ecosystems of open-source, vendor-neutral, cloud-native software.

**YOUR CHOICE:** Develop for all, scale as needed, guard software chain, optimize resource utilization.

---

**Transformational Services with Security and Simplicity**

**MyChoice** (develop for all, scale as needed, guard software chain, optimize resource utilization)

**Why Red Hat?**
- **Enhance Expertise with Orchestration and Automation:**
  - 83% use Kubernetes for container orchestration
  - More agility, less staff time, CNCF certified

---

**Vendor lock-in, application, and data portability:**
- Developer expertise, security

---

**Hybrid delivers best of public and private clouds:**
- Enhanced security and compliance
- Improved IT infrastructure management and flexibility
- Seamless experience, developers use preferred languages, frameworks, tools

---

**Why Red Hat?**

**Open Source Environments:**
- Unified storage across software-defined clouds
- Reusable microservices, uniform connections, policy management with Service Mesh
- Streamline workflows, development, container builds, deployment

---

**OPEN SOURCE: Build infrastructure flexibility, speed innovation, reduce costs, and eliminate vendor lock-in.**

**Why Red Hat?**
- **Increase consistency, enhance security:**
  - Cloud-like simplicity, operational consistency, common management across all infrastructure
  - Continuous security, authentication, authorization, secrets management, auditing

---

**Infrastructure consolidation:**
- Open source innovation

**Optimize resources utilizing:**
- Infrastructure consolidation

---

**Increase consistency, enhance security:**
- Cloud-like simplicity, operational consistency, common management across all infrastructure
- Continuous security, authentication, authorization, secrets management, auditing
