“Bentley MicroStation and its discipline-specific applications have enabled our design team to achieve an unparalleled level of accuracy when compared to any other 3D design software.”

—ARUP

Whether you want to rapidly produce beautiful, precise drawings, create 3D architectural or engineering models, or begin employing information-rich BIM workflows, MicroStation can help you get the job done better, faster, and smarter.

Work Together Better

Since most projects involve many different specialists across the asset lifecycle, being more connected to others means less rework and more informed decisions so you can get things done right the first time. MicroStation is uniquely able to pull together multi-discipline teams and help them work as one with a project-centric approach. You can connect to integrated secure cloud services to share files, monitor project progress and submit deliverables, as well as leverage flexible referencing capabilities, standards management and checking capabilities, and receive personalized in-application recommendations about how to use the product better for your type of work on your type of project.

Rapidly Explore More Design Options

Unlike traditional CAD software, MicroStation is purpose-built to allow you to work in both CAD and BIM workflows. With support for 2D, 3D and hybrid 2D/3D workflows, and the ability to populate and manage an unlimited amount of associated information, MicroStation delivers the simplicity and productivity of CAD with the richness and power of BIM, including rich geometric constraints and a comprehensive set of solid, mesh, surface, and feature modeling capabilities.

Confidently Integrate Any Data Type

A hallmark of Bentley’s technology is its unparalleled ability to open, import, reference, and export the widest available range of data formats and data types. With authentic RealDWG libraries licensed directly from Autodesk, you can reliably work with and produce drawings and models when working with others who use this format. MicroStation can load Object Enablers, providing extensibility with custom objects in the DWG file format. With the ability to consume and produce multi-discipline design information from 83 raster formats, 37 vector formats, 17 point cloud formats as well as common GIS formats like SHP files, you can work with and for anyone without limitations.

Design Within Real-world Context

Communicating your design intent or evaluating a design in the context of where it is in relation to the real world has never been easier with support for aerial/satellite imagery, point clouds, and reality meshes produced from digital photos of a site using Bentley’s leading ContextCapture software. Save time and eliminate error-prone manual work with the ability to model within the context of precise existing conditions.

Improve Project Deliverables

You can automate production of high-quality drawings, including multi-discipline documentation sets, that are consistent across an entire project. When it comes to documentation, the ability to leverage embedded properties and BIM information is unique to MicroStation and PowerDraft—their powerful documentation automation capabilities are huge time savers and a bridge to leveraging BIM models for deliverable production. The advantages span from property-driven annotation, display, and reports to sheet layout and indexing.

Leading Firms Depend on MicroStation

MicroStation is widely used by top design firms.

“MicroStation allows our entire planning team to efficiently collaborate on large models thanks to its flexible referencing capabilities and its intuitive and customizable user interface. In addition, its 3D modeling capabilities help us to present our architectural ideas quickly and professionally.”

Design in Context		
Geocoordination		
Integrate Google Earth content	●	●
Employ geospatial referencing using multiple coordinate systems	●	○
Perform simple AEC coordinate transformation for buildings	●	○
Integrate with OGC Web Map Server	●	○
Reference Geospatial PDFs	●	○
Link real-time GPS data to models	●	○
Use of 2D and 3D Imagery		
Integrate 83 raster image formats	●	◐
Easily integrate hundreds of geospatial coordinate systems	●	◐
Integrate engineering-ready phototextured reality meshes created from photos	●	◐
View and manipulate point-cloud data in 14 popular formats without translation	●	◐
Incorporate geospatial data into reality meshes to perform visual queries and data visualizations	●	○
Support for point cloud and reality mesh streaming services	●	○
Design with True 3D Parametric Modeling		
Parametric Modeling		
Intuitively push, pull, drag, cut, and extrude 3D geometry	●	●
Create parametric solids, surfaces, meshes, and feature models	●	◐
Create and apply persistent geometric constraints to 2D and 3D geometry using complex expressions	●	◐
Build parametric objects with predefined variants to more easily find and manage components	●	◐
