# For web application security of national importance

Invicti Security is a leading provider of DAST, IAST, and SCA web application security solutions for government environments. We provide solutions designed to close web application security gaps. Invicti products automate application vulnerability identification, confirmation, and management to keep public information and critical infrastructure secure.

## 4 steps to secure applications

Incorporate security as a permanent automated part of your web application development.

### Step 1: Discover and crawl your assets

- Complete visibility of all websites, web applications, and APIs – including those you might not know you have
- Built-in scriptable authentication

### Step 2: detect vulnerabilities

- Proof-based scanning
- Automate the workflow to automatically open a trouble ticket with details about where the vulnerability is and how to fix it
- Prioritize exploitable vulnerabilities

### Step 3: resolve vulnerabilities

- Confirmed vulnerabilities speed up remediation and reduce noise
- Suggested best practice fixes reduce the time needed to resolve vulnerabilities
- Integration with existing tools and processes to easily manage and assign security tasks

### Step 4: continuously secure

- Ongoing scanning and security checks throughout the development lifecycle
- The key to complying with many federal security standards

# Web application security without compromise

More Than Scanning: Visibility and Control

## Discovery

Automatically identify all of your web applications. Even ones you don't know about.

## Best scanning engines

Scan every corner of every application for complete vulnerability visibility.

## Proof-based scanning

Automatically confirm scan results. Reduce manual verification, reduce false positives.

## Integrations & workflows

Meet developers in the tools they already use to streamline communication and remediation.

“Invicti has become a knowledge base for our Cyber Division when discussing web scanning for vulnerabilities. Invicti's Guided Success offering was able to assist us with building out the perfect setup to best fit our environment.”

**C. Huey**  
IT Professional, City of Houston

# Seamlessly integrate with your current systems

Designed with government in mind, Invicti has the right solution for you.

Invicti's web security solutions identify and confirm vulnerabilities –then seamlessly assign them for remediation through integrations with popular issue tracking systems and CI/CD tools (i.e. JIRA, Github, GitLab, ServiceNow, Splunk, Jenkins, Circle CI, Azure Pipelines and more). Leveraging Invicti reduces the time and resources needed for vulnerability validation, issue remediation, and achieving security compliance.
