CHECK POINT™
PUBLIC SECTOR

Enhancing Law Enforcement Security
Check Point Solutions for a Safer Tomorrow

Empowering law enforcement with advanced, reliable, and scalable cyber security solutions to protect mission-critical operations.

Law enforcement agencies face unique cybersecurity challenges as they safeguard sensitive data, critical infrastructure, and public safety services. From combating ransomware attacks to securing real-time communications and evidence systems, agencies must operate in an increasingly complex digital environment while adhering to strict regulatory requirements like CJIS (Criminal Justice Information Services). Check Point Software Technologies delivers comprehensive, AI-powered solutions that protect law enforcement operations from evolving cyber threats while enabling seamless compliance and operational efficiency.

Key Challenges for Law Enforcement Agencies

Law enforcement agencies face several key challenges in today's digital landscape. Ransomware and malware threats are significant concerns, as agencies are frequent targets of attacks that disrupt operations and compromise sensitive data. Protecting personally identifiable information (PII), case files, and evidence while ensuring compliance with CJIS requirements adds another layer of complexity. Resource constraints further exacerbate the situation, as limited IT staff require solutions that are both efficient and easy to manage to reduce operational complexity. Additionally, the rise of IoT devices, body-worn cameras, and cloud-based evidence management systems introduces new vulnerabilities, creating even more security challenges for agencies to address.

How Check Point Secures Law Enforcement Agencies

Data Protection & CJIS Compliance

Data protection and CJIS compliance are critical priorities for law enforcement agencies, and our solutions are designed to address these needs. We utilize military-grade encryption and granular Data Loss Prevention (DLP) controls to protect sensitive case files, personally identifiable information (PII), and digital evidence. Our cloud security solutions, including Harmony Email & Collaboration, ensure that cloud-based systems like Microsoft 365 or Google Workspace are safeguarded against unauthorized access or data leaks, helping agencies maintain compliance and secure their digital assets.

Securing Real-Time Communications & IoT Devices

Securing real-time communications and IoT devices is crucial for law enforcement agencies, and our solutions provide robust protection. Quantum IoT Protect secures body-worn cameras, surveillance systems, and other connected devices, shielding them from cyberattacks. Our Zero

Trust Architecture continuously verifies users and devices accessing agency networks, ensuring that only authorized entities can communicate securely. This helps maintain secure communications between officers in the field and command centers, enhancing operational effectiveness and safeguarding sensitive data.

Simplified Management & Cost Efficiency

Our solutions prioritize simplified management and cost efficiency for law enforcement agencies. The Infinity Platform consolidates endpoint, network, cloud, email, and mobile device security into a single solution, significantly reducing complexity for IT teams. With the automation capabilities of Infinity AI Copilot, threat detection and response are streamlined through AI-powered tools, which help reduce the manual workloads of resource-constrained agencies. This combination of unified security and intelligent automation enables agencies to operate more efficiently while minimizing the strain on their IT resources.

Check Point Solutions Tailored for Law Enforcement

Check Point offers tailored solutions designed to meet the unique needs of law enforcement agencies. The Harmony Suite provides comprehensive protection for endpoints, mobile devices, email platforms like Office 365, and collaboration tools, guarding against phishing attacks, malware infections, and business email compromise (BEC) attempts. Quantum Security Gateways offer high-performance network security with advanced threat prevention capabilities to protect agency perimeters. The CloudGuard Security Suite ensures secure deployment of cloud-based applications, such as those used for evidence storage or inter-agency collaboration. Infinity Global Services delivers 24/7 incident response support, helping agencies quickly recover from cyberattacks and minimize disruption to their operations.

Why Check Point?

With over 30 years of experience in protecting critical infrastructure worldwide, our solutions offer industry-leading threat prevention, achieving an impressive 99.8% malware block rate, as demonstrated by the Miercom NGFW Benchmark. We provide proven, compliance-ready solutions tailored specifically for law enforcement, including CJIS-compliant encryption. Additionally, our unified platform not only reduces the total cost of ownership (TCO) but also increases operational efficiency by up to 50%.
