

Alfresco Digital Business Platform

The Alfresco Digital Business Platform offers open, secure content services with content at its core to let you unlock the value from your most important business information. Give users access to their content wherever and however they work with open, flexible, and highly scalable Enterprise Content Management (ECM). Easily integrate and connect with everyday business applications. Find, view, collaborate on, govern, and securely share digital content—and get information to the right person at the right time.

PLATFORM SERVICES

Security

Alfresco's powerful security features safeguard confidential corporate assets wherever they are accessed or stored. Access Control Lists (ACL) allow granular permissions to users or groups that can be applied to any folder or document in the repository. For an additional layer of security, organizations can encrypt their content or apply intelligent security classifications that comply to highly secure government requirements.

Federation Services

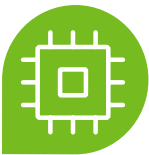

Alfresco Federation Services provides powerful search and management capabilities across more than 60 leading multiple, disparate content applications, network file shares, and email systems (e.g. Box, Documentum, Dropbox, IBM FileNet, Google Drive, Microsoft SharePoint, Network File Shares, OpenText, and many other content systems). Users can find and manage information faster, and organizations can mitigate compliance risk by adding enterprise wide compliance as well as avoiding the effort of complex migrations.

Governance Services

Organizations can mitigate regulatory risk and strengthen compliance with information governance capabilities that offer an unmatched combination of simplicity and control.

Historically, Records Management has been a separate, manual activity with poor user adoption. Alfresco Governance Services overcomes this compliance challenge by making Records Management so simple it “simply happens” automatically and invisibly. Rich information governance capabilities provide regulatory compliance seamlessly into the daily business. Automated Records Management, eDiscovery and Legal Holds strengthen compliance and reduce corporate risk. Alfresco offers the only open source Records Management solution with DoD 5015.02 certification plus compliance with DoD 5015.02 Chapter 3—the highest level of security certification.

AI/ML Intelligence

Alfresco Intelligence Services provides a highly-scalable way to automatically enrich content and gain valuable insights by leveraging Artificial Intelligence (AI) and Machine Learning (ML) services to automatically extract important content often locked away in multiple documents, scanned images, videos and photographs.

Alfresco Intelligence Services provides a highly-scalable way to automatically enrich content and gain valuable insights by leveraging Artificial Intelligence (AI) and Machine Learning (ML) services to automatically extract important content often locked away in multiple documents, scanned images, videos and photographs.

Search

Alfresco Search Services makes it easy for end users to quickly locate the exact document they need. The powerful search features include instant search suggestions, searching both document properties and full text, and the ability to filter search results.

Analytics

The Alfresco Search and Insight Engine is a modern, integrated analytics solution that enables organizations to make better decisions based on real-time data. They gain insight into content, metadata, processes, and governance with developer and user-friendly contextual analytics, without the need for specialized business intelligence (BI) teams.

They gain insight into content, metadata, processes, and governance with developer and user-friendly contextual analytics, without the need for specialized business intelligence (BI) teams.

Integration

The Alfresco Digital Business Platform is built on an open source core with support for open standards and open APIs, while the Application Development Framework reduces time to value for true business agility.

The Alfresco Platform integrates seamlessly with leading applications out of the box, so users can access content from within the applications they use to get their job done. A wide range of extensions and open REST APIs provide the flexibility to add more capabilities for specific business needs.

- Salesforce
- SAP
- Google Docs
- Microsoft Outlook
- Microsoft Office 365 and Office Online
- ServiceNow

...and many other integrations that have been built by Alfresco’s extensive partner network.

Process Services

High-performance Business Process Management (BPM) enables organizations to digitize and streamline a wide range of business workflows.

Visual process design, decision tables and process analytics make it easy for business users to quickly define and refine processes as operational needs change. Even business users can own and quickly modify processes, driving continuous improvement and speeding up application development.

Alongside removing the ongoing cost of Documentum, it was vital that Ethias could prove their new content management solution would deliver clear ROI.

“Alfresco has proved to be scalable and robust, allowing easy API integration to other systems—something that was crucial for project success.”

- ETHIAS

User Productivity & Experience

People can easily access content and processes from within the applications they use every day. The Alfresco Digital Workspace accelerates user adoption with intuitive out-of-the-box experiences optimized for common tasks. It can be quickly and easily extended by developers to craft customized fit-for-purpose solutions. Additional user tools, including desktop sync, native mobile apps, and a powerful content viewer (with inbuilt annotation and redaction) are complemented by a range of partner integrations to provide users with a wide choice.

Cloud Native Architecture & Scale

Alfresco's Open & Modular approach delivers the high performance that companies expect. Options for horizontal and vertical scaling allow companies to adjust their infrastructure dynamically to the current workload—on-premises or in the cloud. Optimized for AWS as well as MS Azure and Google Cloud Platform, Alfresco offers agility, extreme scalability and low Total Cost of Ownership:

- Connectors for Amazon S3, Amazon S3 Glacier or MS Azure Blob Storage dramatically reduce storage costs by managing information lifecycle with AGS rules + metadata + AI
- Amazon Aurora support—high performance metadata and process activity DB
- Dynamic scaling automatically responds to the current workload

ALFRESCO'S FLEXIBLE DEPLOYMENT OPTIONS

Platform as a Service (PaaS)

- Cloud native platform built on the AWS Well Architected Framework
- Fully automated and auditable—Versionless software that is continuously updated throughout the year. Infrastructure as code doesn't require any hand tweaking of deployments
- Secure - full data isolation in your own VPC. Full encryption of your data at rest and in transit
- Exceptional Time to Value—no waiting on IT or Data Centers and better use of your resources to focus on building business value
- Customizable—extensions can be easily built on top to provide the exceptional UX that business units are demanding

Private Cloud (IaaS)

- Choice of IaaS vendors—Alfresco can be deployed on multiple IaaS cloud platforms like Amazon Web Services, Microsoft Azure or Google Cloud Platform.
- Containerized deployments—including support for Amazon Elastic Container Service for Kubernetes (EKS) for fast and standardized deployments across all environments
- Tight integration of native cloud services—customers can leverage cloud storage services like AWS S3 and AWS S3 Glacier as well as the MS Azure blob storage to reduce their storage costs

On-Premises

- Modern deployment options including Docker and Kubernetes for fast and standardized deployments across all environments
- Customers can leverage Cloud Services like the Amazon S3 storage from their on-premises environment

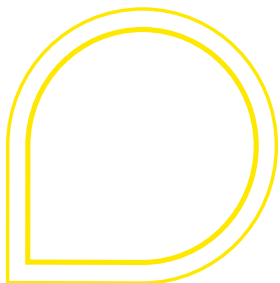

"SalesConnect would not be possible without our partnership with Alfresco. In the digital world, no one company can go it alone. We need to move fast with strong partnerships and Alfresco enabled us to build this transformative, scalable, open, easy to use platform and we did it very quickly."

*Chuck Robbins, CEO
Cisco*

"Alfresco was the only ECM solution that absolutely met our requirement for cloud-native capabilities. Other advantages included the platform's small footprint, REST APIs and CMIS support, strong customer references, and an enterprise open source model that ensures we're getting the attention we need as a Fortune 75 company."

*SVP & CIO, Global Specialty,
Liberty Mutual*
