in exploring this content.

Carahsoft is the **Trusted Government IT Solutions Provider**® supporting a broad portfolio of industry-leading technologies through NASPO ValuePoint and a wide range of other contract vehicles.

As the **Master Government Aggregator**®, Carahsoft connects government agencies, industry partners, and technology providers to deliver innovative, mission-focused solutions.

In partnership with BlackFog, we provide technology solutions that drive modernization, strengthen operations, and ensure compliance with evolving government standards.

ADX Vision

Real-Time Visibility Into AI Use And Governance

Shadow AI has quickly become a major source of data exfiltration, leading to intellectual property loss, and regulatory exposure. **ADX Vision delivers on-device protection** that identifies and prevents unauthorized data sharing with unapproved AI tools, enabling secure, compliant use of generative AI across the enterprise.

Bringing Visibility To Shadow AI

Building on BlackFog's leadership in anti data exfiltration (ADX), **ADX Vision** gives security teams deep visibility and control over AI activity at the endpoint. Moving beyond traditional perimeter defenses, it continuously monitors and blocks sensitive data flowing into large language models in real-time, strengthening governance, reducing breach exposure, and eliminating the blind spots created by shadow AI.

SOC 2 Certified

BlackFog understands the demands of today's complex regulatory environment. We've invested heavily in compliance and are certified as a SOC 2 platform. This certification provides assurance that BlackFog not only follows industry best practices but also has the processes in place to safeguard your data.

LLMs: Redefining Insider Risk

Large language models (LLMs) introduce a new class of insider risk. As employees interact with generative AI tools, sensitive data can be exposed through prompts, uploads, or unapproved integrations. Shadow AI circumvents corporate security controls and creates untraceable channels of data exfiltration. Because LLMs may store or train on user input, this information can persist beyond corporate oversight, creating lasting security and compliance challenges.

Less than 20% of AI apps are visible or managed by AI teams, revealing major governance, security and compliance gaps.

(Zluri - The State of AI in the Workplace 2025)

Secure Every Endpoint, Every LLM Interaction

ADX Vision provides the visibility and control organizations need to manage AI securely. Operating directly on the device, it detects shadow AI activity, stops unauthorized data movement in real-time, and enforces governance policies automatically, all without disrupting productivity. The result is unified insight across the enterprise and the confidence that sensitive information stays protected.

Visibility, Control, And Confidence For The Modern Enterprise

As AI reshapes the enterprise, organizations need more than reactive defense, they need continuous insight and proactive prevention. **ADX Vision** delivers endpoint-level protection that keeps data secure, ensures responsible AI use, and empowers security leaders to stay ahead of evolving risks.

ADX

BlackFog's ADX platform delivers comprehensive protection against shadow AI, insider threats, and data exfiltration, all in one lightweight, on-device solution that prevents data from leaving the organization in real-time.

Proven Prevention

Built on BlackFog's anti data exfiltration (ADX) technology, **ADX Vision** stops ransomware, insider threats, and shadow AI data loss across global enterprises, before breaches occur.

Governance And Control

ADX Vision enforces AI usage policies automatically, ensuring compliance and accountability across every device. Security teams gain real-time visibility into how data interacts with AI tools, empowering them to manage risk without slowing innovation.

Key Benefits

- **Proactive AI Protection:** Monitors and controls outbound data flows to prevent sensitive information from reaching unapproved AI tools.
- **Endpoint-Level Exfiltration Prevention:** Stops data at the source, even if the device is compromised.
- **Compliance and Risk Reduction:** Enforces AI usage policies to support GDPR, HIPAA, CCPA, and other frameworks.
- **Comprehensive AI Visibility:** Provides insight into how, when, and where AI tools are used, enabling early action on shadow AI trends.
- **Seamless Integration:** Lightweight deployment that enhances existing endpoint security solutions.
- **Protection for IP, PII, and Confidential Data:** Keeps proprietary and customer data under organizational control.

ADX Vision integrates seamlessly with your existing security stack. While traditional tools protect the perimeter, **ADX Vision provides visibility and control to secure your data from the inside out.** It prevents unauthorized data sharing and exfiltration, including interactions with unapproved AI tools, restoring CISOs' ability to govern data confidently in the age of AI.

Unlock The Power Of AI - Securely

Generative AI and LLMs can transform productivity, but without governance they introduce significant risk. **ADX Vision** empowers organizations to embrace AI responsibly, giving teams the freedom to innovate while ensuring every interaction remains visible, auditable, and secure.

48% of employees admitted to uploading company data into public AI tools, and **only 47% received formal AI training**, showing real risk of unsanctioned AI use. (KPMG 2025)

About BlackFog

BlackFog is a global cybersecurity company pioneering on-device anti data exfiltration (ADX) technology. Its AI platform preemptively stops hackers from exploiting vulnerabilities in enterprise security systems, preventing ransomware, spyware, malware, phishing, and unauthorized data collection and profiling. It effectively mitigates the risks associated with data breaches and insider threats.
