

Making Open Source Work Better – For Everyone.

With Tidelift, healthcare agencies can use open source with confidence, so they can create more incredible software, even faster.

Tidelift Contacts

Amy Hays, *Head of Demand Generation*

Robert Wickham, *VP Public Sector*

Matthew Arnow, *Head of Enterprise Sales*

Why Tidelift?

- **Streamline the development process:** remove obstacles that slow down application development
- **Improve open source software supply chain health and security:** identify and remove security, maintenance and licensing-related risk

In Carahsoft's Pavilion at HIMSS 2024, Tidelift will overview how their solutions and platforms are empowering healthcare IT teams to:

- Leverage open source in various healthcare functions, from enhanced diagnosis and treatment to predictive modeling and wearable remote monitoring devices.
- Strategically prioritize the security and effective maintenance of the open source software supply chain so your agency can continue to innovate while minimizing risk
- Curate catalogs of vetted, approved open source components with validated licenses that follow secure software development practices, then continuously curate them against the set of organizationally-defined open source policies.

Visit us at HIMSS 2024 on Thursday, March 14
