

Dell Technologies: Partner Webinar Series

Monetizing Federal AI Opportunities

Thank you for your interest
in exploring this content.

Carahsoft is the **Trusted Government IT Solutions Provider**® supporting a broad portfolio of industry-leading technologies through NASPO, GSA, ITES-SW2 and a wide range of other contract vehicles.

As the **Master Government Aggregator**®, Carahsoft connects government agencies, industry partners, and technology providers to deliver innovative, mission-focused solutions.

In partnership with Dell Technologies, we provide technology solutions that drive modernization, strengthen operations, and ensure compliance with evolving government standards.

To learn more about how Carahsoft can support your technology needs, please visit carahsoft.com

Dell Technologies Advantage

Modern Workplace

- World's smallest,¹ thinnest, most powerful commercial AI PCs²
- World's #1 monitors³
- Most manageable and secure commercial PCs⁴
- Leading in use of sustainable materials

Modern Data Center & Multi-cloud

- #1 servers⁵
- #1 external storage⁶
- #1 storage software⁷
- #1 Purpose-Built Backup Appliances⁸

Artificial Intelligence

- The world's broadest AI solutions⁹
- Open ecosystem that continues to grow with proven, validated solutions
- World's best management consulting firms – Forbes 2024

Security / Resilience

Industries most secure supply chain

Sustainability

An industry leader in sustainable materials and packaging

⁴ IDC, Global AI Buyer Sentiment, Adoption and Business Value Survey, October 2023.

The Dell AI Factory

Dell's approach to standardizing and accelerating AI use cases

People – Processes – Technology
Use Case – Data – Outcomes – Technology

USE CASE: DIRECTING THE AI

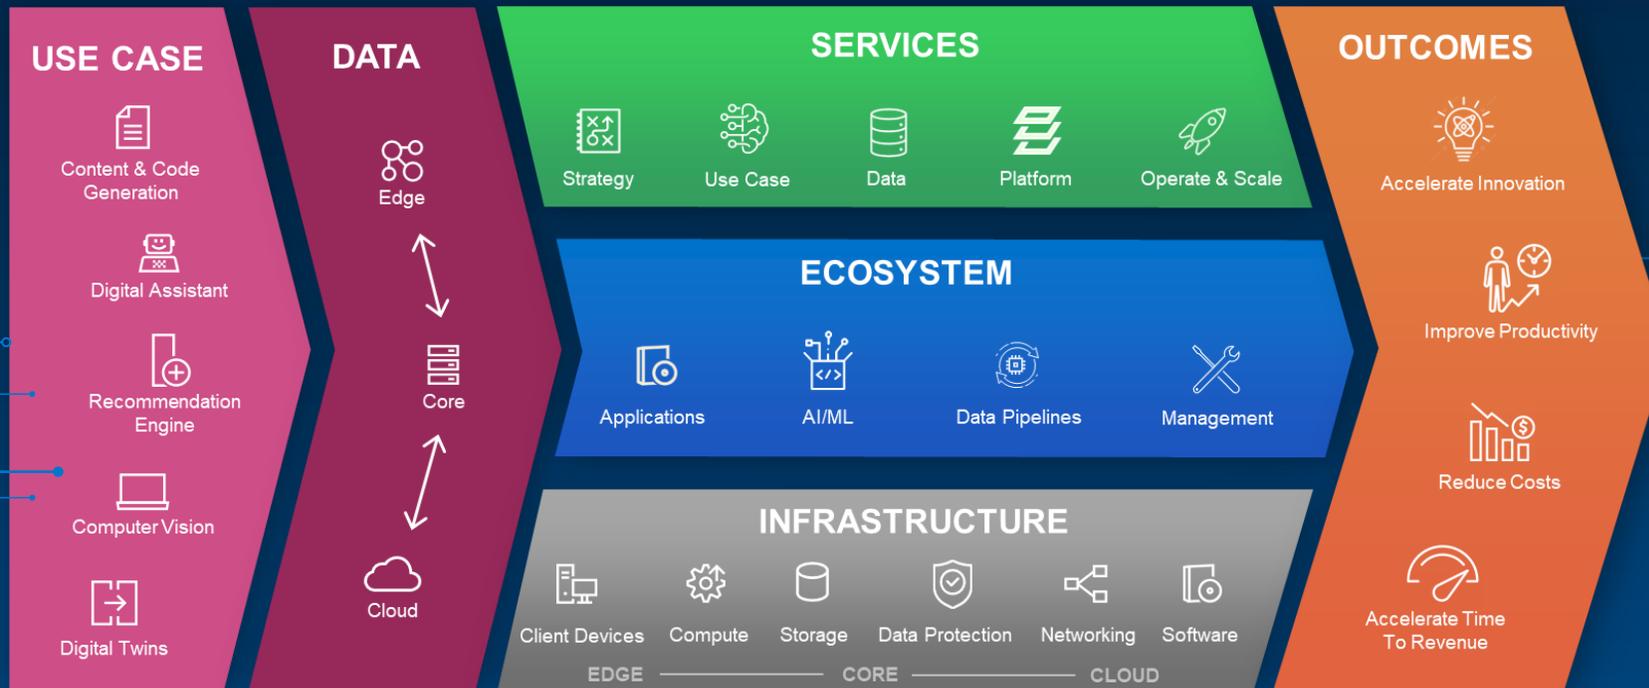

How the AI is being utilized is an important step in creation of the AI, and how that AI is going to enhance the human experience.

DATA: FUELING THE AI FACTORY

Data is the raw material that powers the AI Factory
Most valuable data is on-premises and at the edge
Dell helps you bring AI to your most valuable data and is a leader in storing, protecting and managing that data

EXPERT AI SERVICES

An effective AI Factory needs a skilled team to succeed, but AI-ready skills are in short supply and the ecosystem is diverse
Dell has extensive experience guiding customers through their AI journeys, accelerating AI outcomes aligned to business objectives while utilizing the right technical solutions at scale

AI OPTIMIZED INFRASTRUCTURE

Infrastructure is the foundation of the AI Factory
AI use cases are diverse and AI technologies are rapidly evolving
Dell has the broadest AI portfolio from client to cloud allowing you to right size your AI investment and giving you the flexibility to run AI anywhere

AI OPEN ECOSYSTEM

No single vendor can meet all your AI needs
Dell has a proven history of nurturing open ecosystems and is committed to building a broad AI ecosystem giving customers greater access to innovation and flexibility

OUTCOMES POWERED BY USE CASES

The AI Factory produces business outcomes powered by your highest priority use cases
Dell simplifies the deployment of your most important AI use cases with validated solutions and tailored services

Dell AI Factory Accelerates AI Adoption

SIMPLE

Comprehensive AI services and validated, optimized solutions make AI easier, augmenting skills gaps and addressing data readiness

SECURE

Trusted infrastructure, full-stack solutions and services helps ensure valuable data is protected, managed and accessible

ECONOMICAL

Industry's broadest AI solutions portfolio¹ addresses "no one-size-fits all" approach

¹ Based on Dell analysis, August 2023. Dell Technologies offers hardware solutions engineered to support AI workloads from Workstations PCs (mobile and fixed) to Servers for High-performance Computing, Data Storage, Cloud Native Software-Defined Infrastructure

Running AI – Partner Opportunity

Integrating the LLM into the Data Center

Identify and qualify the AI + federal use case

- Understand the mission problem first (fraud, cyber, logistics, citizen services, etc.), not the technology. AI projects are usually mission funded, not traditional IT budget, so you need the mission owner in the conversation.
- Check AI maturity: do they have existing pilots, AI labs, data science teams, or is this a first initiative?
- Determine high-level AI pattern:
 - GenAI for knowledge/search/summarization
 - Predictive/ML for risk, maintenance, classification
 - Computer vision at the edge (safety, inspection, security)
- Qualify that it's a real opportunity, not just ideation:
 - Defined problem and success criteria
 - Sponsor with budget authority
 - Timeframe and procurement path (RFI/RFP/IDIQ, OTAs, etc.)

Clarify who does what:

- Dell: AI infrastructure (Dell AI Factory), services for AI strategy, platform implementation, managed services, Zero Trust, multicloud by design, edge platforms, etc.
- Partner: consulting, data science, application development, domain solution IP, ongoing ops.
- For U.S. Federal, ensure the partner is in Dell Technologies Federal Partner Program and current in good standing to use federal deal registration and incentives.

Running AI – Partner Opportunity

Integrating the LLM into the Data Center

ALIGNMENT

Register and structure the deal

Co-develop the AI strategy and roadmap

- Use Dell AI Factory and AI Services as the backbone:
- Run an AI strategy / use-case workshop:
- Identify and prioritize high-value use cases and map them to federal mission and compliance constraints.
- Clarify data sources, governance, security/ZT requirements, and on-prem vs cloud mandates (for U.S. Federal, note that for some offers, data must stay on-prem).
- Apply the Dell AI Factory components:
- Design a winning AI strategy aligned to mission and policy.
- Power AI with enterprise/federal data across DC, cloud, edge, AI PCs/workstations.
- Decide where to bring AI to the data vs. moving data to AI, critical for federal edge and classified environments.
- Map required services:
 - Advisory (AI strategy, business case, use-case definition).
 - Platform implementation (AI Factory platform, MLOps/RAG, data integration).
 - Deployment/support/managed services to keep the environment secure and compliant.

Running AI – Partner Opportunity

Integrating the LLM into the Data Center

Architect the compliant AI platform and solution

- Design a federal-ready architecture:
 - AI-ready servers (e.g., PowerEdge XE/RTX), storage, networking, and multicloud by design (APEX) to align with hybrid cloud/edge mandates.
 - Edge architectures where mission dictates low latency (defense, transportation, law enforcement).
 - Embed security and Zero Trust from day one:
 - Hardened infrastructure, secure supply chain, and Zero Trust-aligned controls for workloads and data.
 - Integrate partner IP and services:
 - GSIs and boutique partners add AI models, apps, data pipelines, and domain logic, creating a joint solution stack powered by Dell.

Govern, secure, and continuously improve

- Establish governance:
 - AI risk and ethics, model monitoring, and compliance reporting tailored to federal standards.
- Plan for continuous innovation:
 - Refresh hardware as AI demands grow (GPUs, memory, storage).
 - Revisit AI roadmap regularly with the customer and partner (QBRs, EBCs, workshops).

DESIGN

Running AI – Partner Opportunity

Integrating the LLM into the Data Center

Execute pilots/POCs and validate outcomes

- Start with a scoped pilot:
- “Walk then run”: PoCs and POVs with constrained data sets/users to de-risk and prove value before full rollout.
- Ensure measurable mission KPIs (time savings, accuracy, risk reduction, throughput).
- Use Dell + partner resources:
 - Regional AI Partner Hubs, AI field CTOs, AI BDMs, and AI Pursuit team support for qualification, architecture, and exec alignment.
- For federal customers:
 - Validate data residency, export controls, FedRAMP/agency requirements and confirm they’re satisfied by the joint solution.

Running AI – Partner Opportunity

Integrating the LLM into the Data Center

Scale to production and expand the footprint

- Once the pilot proves value:
- Scale to production AI Factory: larger clusters, additional use cases, more agencies or components.
- Extend from single-project to portfolio-level AI strategy across programs (e.g., multiple bureaus, commands, or agencies).
- Use Dell AI Factory and partner ecosystem to:
 - Add more workloads (search, summarization, code assistants, vision, etc.).
 - Introduce managed services where appropriate (subject to federal offer exceptions).

Drive end user capabilities

- Enable users with smart AI embedded devices:
- Clients are integral to AI adoption because AI only delivers value when it is tightly aligned to each client's unique data, business goals, and ways of working
- The user's data are the fuel that drives new learning and enhanced capabilities to the AI
- Successful AI adoption is about workforce enablement—upskilling, change management, and integrating AI into real processes, which only the client can drive internally.
- The AI factories are iterative – clients continuously provide feedback on model quality, business impact, and new use cases, which shapes tuning, retraining, and future investments.

PRECISION PORTFOLIO

POWER AS BIG AS YOUR IDEAS

Intelligent Performance | Immersive User Experience | Mission Critical Reliability

Mobiles 3000, 5000, 7000 Series

Towers 7000, 5000, 3000 Series

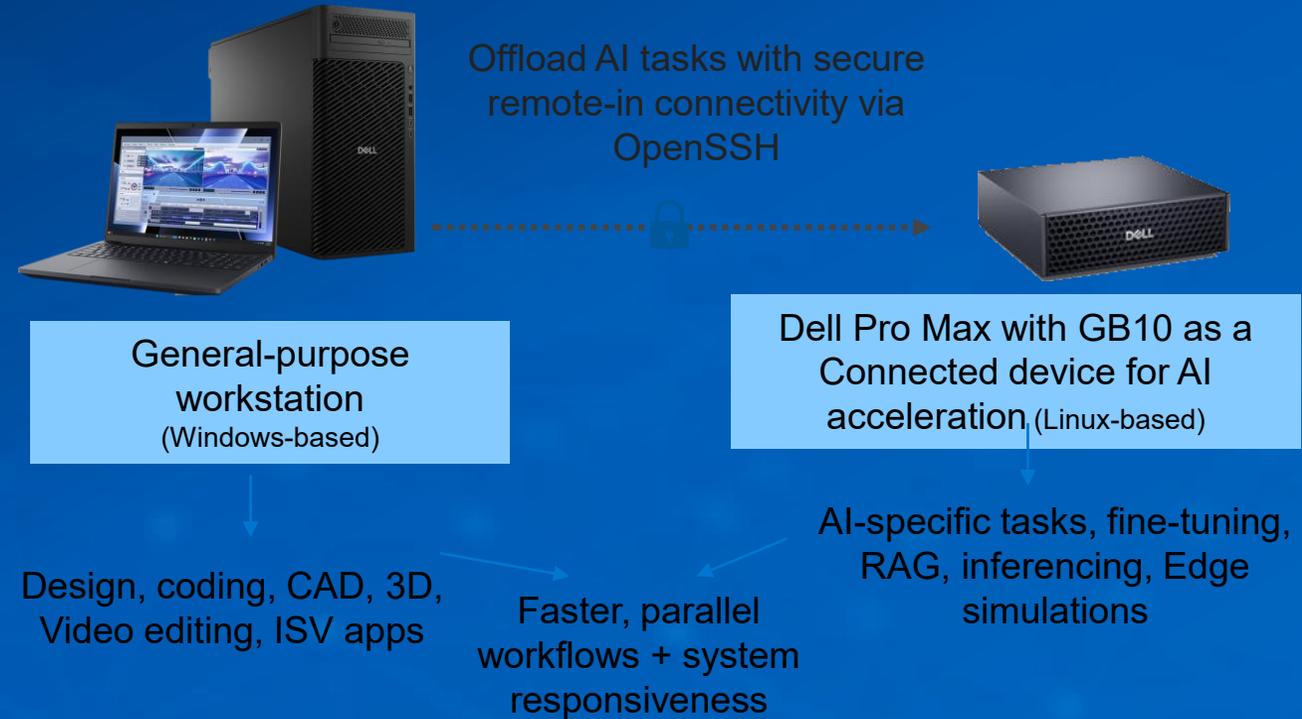

Dell has been a leader in workstation technology for over 25 years. Driven by customer insights and experiences, we offer intelligent performance and mission critical reliability for your key applications. Our groundbreaking innovations are a direct result of working with our customers to understand their pain points and how we can deliver the best solutions.

Dell Pro Max with GB10 – Standalone vs. Connected

Works best as a standalone device when...

- You want a ready-to-code AI development system with NVIDIA's DGX OS, CUDA libraries, and software stack pre-configured.
- You prefer Linux for AI development and deployment.
- You need to run large models locally without GPU or cloud dependency.
- You need a portable AI environment for research, fieldwork, or edge projects.
- You want a self-contained system that's easy to redeploy to different projects.

Works best as a connected device when...

- You have a workstation for design, coding, or content creation and don't want AI jobs slowing it down.
- You want to offload AI workloads to free up your main system.
- You need parallel workflows — development on one machine, inference on another.
- You want dual OS flexibility — Windows on your workstation, Linux on the GB10.
- You want a cost-efficient alternative to high-end GPU upgrades.

PowerEdge Servers

Purpose-built | Intelligent | Cyber Resilient

Purpose-built

**Scale AI, Edge &
Performance
Anywhere**

Intelligent

**Accomplish more
with Automation &
Improve Operational
Efficiencies**

**Cyber
Resilient**

**Accelerate Zero Trust
Adoption**

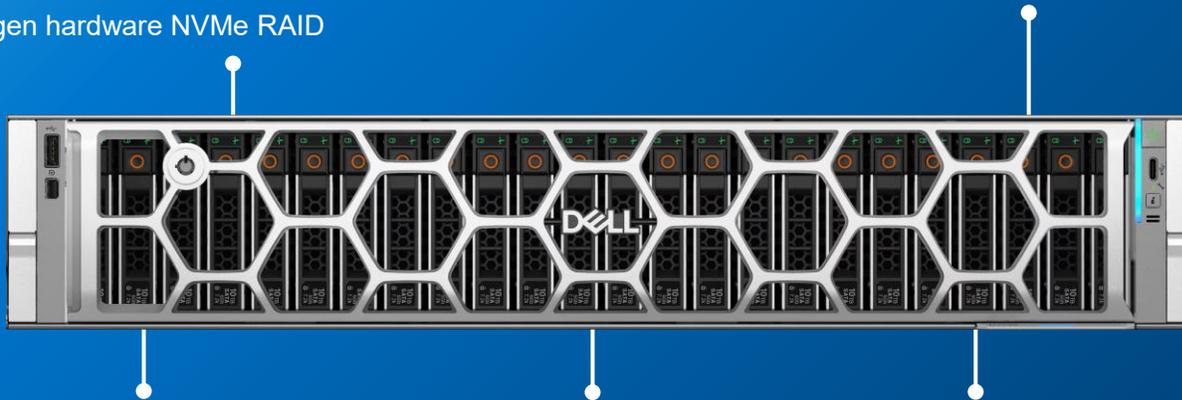

PowerEdge R770 / R7725

Support for up to 28 Drives

- Up to 40 x EDSFF E3.S Gen5 NVMe
- Gen5 NVMe* & SAS4 support
- Rear Hot-Plug BOSS-N1 (2 x M.2 NVMe) for boot
- Next-gen hardware NVMe RAID

Support for high-speed and memory capacity

- Up to 32 DDR5 DIMMs
- Up to 6TB

2 Socket Capable

- Intel / AMD processors
- High-bandwidth memory CPUs

Support for GPU

- 2 x 450W (DW) or 6 x 75W (SW)

Flexible I/O

- Up to 8 x PCIe Slots
- Optional 2x OCP 3.0 slot

- Smart Cooling
- Designed for growing scale-out solutions and air-cooled support
- Industry-leading manageability and security

MAINSTREAM

Data Center
(private cloud)

TARGET WORKLOADS

High Performance Scale-Out Databases

Architect for growth and scalability using high core count CPUs with the latest DDR5 memory technology, high-bandwidth networking and Gen5 based NVMe storage.

Next Level of Virtualization

6TB of memory combined with >192 cores of the latest generation Intel/AMD CPUs enables high-density virtualization in a 2S server..

AI Training

With the latest Gen5 PCIe enabled AMD GPUs and NVMe drives designed to offer the highest throughput on the largest datasets, customers benefit from reduced training cycles and faster AI deployments.

PowerEdge XE9780 / XE9785

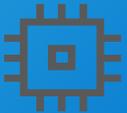

8-way SXM GPU server that provides leading AI performance in a dense air-cooled design

AI / ML & HPC

Dell Technologies Ecosystem

- NVIDIA – Core to the Dell AI Factory with NVIDIA, used extensively in federal AI and HPC initiatives as the integrated development and runtime environment for LLMs, RAG, and agentic workloads in secure data centers and labs.
- Google (Gemini) – Positioned specifically for on-prem Gemini LLM deployments on Dell AI Factory for regulated and public sector environments that require tight data control and sovereignty.
- Meta (Llama / Llama Stack) – Used with Dell AI Solutions with Llama and Llama Stack on PowerEdge for sovereign and public-sector-friendly GenAI, where open models and on-prem control are important.
- Cohere – Sovereign / regulated enterprise GenAI and agentic AI partner (Cohere North on Dell AI Factory) with explicit positioning for secure, no-code agents and RAG in highly regulated sectors including public sector and government.
- H2O.ai – Highlighted as a GenAI and agentic AI platform for air-gapped, on-prem, data-sovereign deployments, with “Federal” called out as one of its top three segments on Dell AI Factory reference material.
- Red Hat (OpenShift / OpenShift AI) – Core AI platform partner for federal-grade containerized AI, often combined with Dell Private Cloud Platform and AI Factory for Sovereign AI / Private AI-in-a-Box offers for government and NATO-style environments.

Dell Technologies Data Protection Solutions

Comprehensive portfolio built to protect proven & modern workloads

Accelerate the power of AI for your data

Dell Accelerator Workshop for Generative AI is the first step in achieving a successful journey into GenAI

Experience an easy point of entry from Dell Accelerator Workshop

Half-day, fee-waived facilitated workshop brings IT and business stakeholders together to begin developing a point of view on important AI and data questions.

Dell experts work with your team to create a vision for your future state, utilizing our "AS-IS / TO-BE" methodology to align on priorities and next steps. We will conduct interview and review the existing environment, identifying challenges and driving consensus that is synthesized into an Executive Overview.

Assessment Dimensions

The Accelerator Workshop is a great starting point to determining how your business will achieve maximized value from AI and data. We begin to consider the needs for getting your organization ready across key priority areas, defining a high-level transformation plan aligned to your strategic vision and architectural principles.

What is an Accelerator Workshop?

Interactive, strategic session with mission personnel and IT leadership

Align cross-organizational priorities and gain consensus

Deliver actionable roadmap with recommendations to achieve desired results

Next Steps and Q & A

Architect your AI solutions to assist your customer's mission

- Data Center Infrastructure
 - Compute
 - Storage
- Platforms
- Applications
- Multi-Clouds

Higher Revenue &
Higher Profit

Next Steps

- Schedule a Test Drive
- Contact your Distributor or Dell team
