

SYM ED Bundle

K-12 schools to higher education campuses are challenged with protecting sensitive data, ensuring the privacy of students and faculty, and maintaining a safe online learning environment. At the same time, many software vendors in the marketplace lack the understanding of the financial and workforce challenges that these institutions face. Introducing the SYM ED Bundle, a powerful cybersecurity product bundle offered by Carahsoft, powered by Broadcom - a solution to providing top-of-the-line, Gartner-recommended security products at a customer-friendly cost to ensure that our students' and faculties' digital experiences are safe and secure.

Security - SESC, Email Security Cloud

End-User Endpoint Security

Symantec Endpoint Security delivers comprehensive protection for all traditional and mobile devices across the entire attack chain. Symantec endpoint innovations include: Adaptive Protection to stop living-off-the-land attacks, Active Directory security to prevent lateral movement, Threat Hunter to combine advance machine learning with expert analyst research for actionable threat intelligence, and more. SES:

- Protects all endpoints (workstations, modern mobile devices, and servers) across all major operating systems.
- Deploys easily with a single agent installation.
- Provides flexible management options: fully cloud-based, on-premises, and hybrid.
- Is available in two licensing options: Symantec Endpoint Security Complete (SESC) and Symantec Enterprise Security Enterprise (SESE)

What is Email Security.cloud?

Email Security.cloud is a complete email security solution that safeguards Office 365, G Suite, and on-premises email. It blocks sophisticated email threats (such as ransomware, spear phishing, and business email compromise) with multi-layered defense and insights from the world's largest civilian global intelligence network. Email Security.cloud also keeps emails secure and confidential. Tight integration with Symantec Data Loss Prevention (DLP) enables a single, enterprise-wide DLP policy to discover, monitor, and protect sensitive data sent by mail.

Add-ons for threat isolation, fraud prevention, threat detection & response, and policy-based encryption are available.

What Is Ghost Solution Suite?

Ghost Solution Suite is an industry leading and award-winning solution for deploying and managing desktops, laptops, tablets, and servers. From a single management console, IT administrators can quickly and easily migrate to the latest operating systems, inventory machines, deploy software, and perform custom configurations across multiple hardware platforms and OS types, including Windows, Mac, and Linux.

What is IT Management Suite

IT Management Suite (ITMS) enables IT administrators to securely manage the entire lifecycle of desktops, laptops, and servers across Windows, Mac, Linux, Unix, and virtual environments, including deployment, asset management, and patch management, to reduce costs and increase productivity. IT Management Suite consists of three endpoint management suites, which are also available stand-alone:

Asset Management Suite (ASM)

Client Management Suite (CSM)

Server Management Suite (SMS)

ITMS Integrations:

Enterprise Security (SES): ITMS coordinates with SES to automatically block network access for endpoints that have failed a compliance scan (e.g., missing security patch) to help prevent the spread of critical vulnerabilities.

Premium - SESC, Email Security.cloud, ITM Suite, Ghost

Obtain both security and management products with this bundle option.
