**TALK DATA TO ME**

# Enhancing Federal Data Security From Data Protection to Cyber Resilience

This insightful webinar thoroughly explored the smooth transition from conventional backup practices to advanced, cutting-edge cyber resilience frameworks, ensuring the robust protection of mission-critical federal data and operations.

## What Is Cyber Resiliency

To put it simply, cyber resiliency is what an organization puts in place to protect itself from cyber attacks, and in turn how quickly can one return to business as usual. Within the past 50 years, cyber resiliency has shifted, in the early 1980s one focused on firewalls and safeguarding their data, which is still important today. But in the past five years, we have shifted to focus more on our cybersecurity and what AI can do to help us.

## How Can We Help?

### Hitachi Vantara

Our expertise and technologies have adapted with the time, we have a 7-layer, defense-in-depth strategy that brings together software and services to achieve the operational resilience your agency needs.

### Commvault

With Commvault Cloud, you can take into account your budget and data security. This platform has access to AI-driven capabilities that can fight against attacks and keep your data safe.

### Together

Hitachi is the only OEM of Commvault, for 20 years. With this partnership, it allows customers to have seamless support, scalable storage, all while enhancing data protection.

## Extra Information

### Pillars of Cyber Resiliency

- Identify
- Protect
- Detect
- Respond
- Recover
- Govern

### Key Takeaways

1. It's not just about backups anymore.
2. It's not just about avoiding a breach; it's about how you respond.
3. True resiliency requires trusted industry partners.

### Featured Speakers

#### Gary Hix

Chief Technology Officer  
Hitachi Vantara Federal

#### Cyrus Cama

Solutions Director, Global  
Partner Organization  
Commvault
