Salesforce DevOps for the Public Sector

Flosum is the only 100% native DevOps solution purpose-built for Salesforce, making it the best, if not only, choice for government agencies. Our customers include some of the most security-conscious federal, state, and local government organizations where governance, compliance, and data security are paramount. We are exclusively approved for use on the government cloud and are FedRAMP compliant.

Security, Compliance & Governance

Flosum is the most secure Salesforce DevOps solution available. As the only release management solution approved for use on Government Cloud, it meets Salesforce FedRAMP and other government security compliance standards. Out of the box features include code review, process automation, compliance and perpetual audit trail.

Designed for the Entire Salesforce Declarative Development Team

Unlike other open source tools on the market, Flosum's ability to handle metadata and declarative components with a familiar Salesforce Lightning UI makes it perfect for Salesforce Admins, Citizen Developers, Developers and Release Managers or any others who participate Salesforce development. Salesforce DX Scratch orgs and development tools are also supported.

End to End Application Lifecycle Management

Flosum streamlines Salesforce application development and customization from user requirements through regression testing and release management. Support continuous deployments and keep development, QA, and production orgs in sync, with built-in intelligent merge tools, data migration, and version control. Maintain quality with code review, static code analysis, and process automation. Gain visibility into development processes and audit trails with built in dashboards and reporting.

Integration with Other Leading Solutions

Flosum integrates with virtually any other specialized development tools for Salesforce including JIRA, Selenium, Apex PMD, and Git-based version control, and others.

Instant ROI, Faster Release Cycles, Team Productivity

Flosum saves your team time and effort while reducing errors. Our intelligent code compare and merge functionality, code review, release process automation, data migration, and one-click deployment or rollback are just a few features that drive ROI, quality and productivity.

We were surprised to find out that Salesforce was missing a reliable and scalable deployment pipeline. The overhead for managing Changesets is high. We were excited when we found Flosum. AND that they allow us to deploy on our own Gov Instance which makes the laborious work around vetting security super simple.
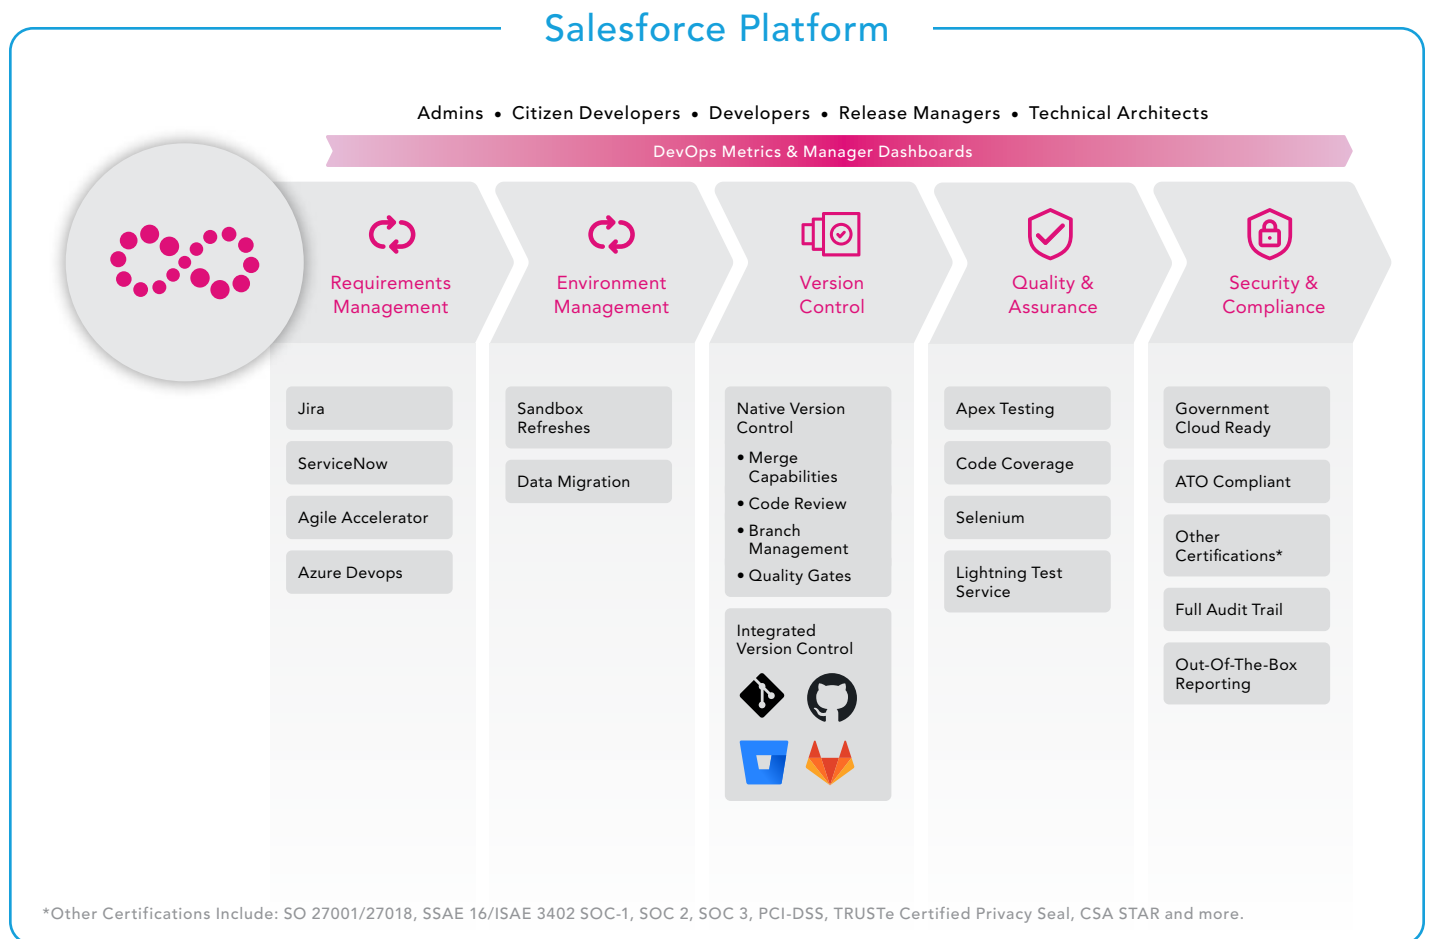

— **Salesforce Developer AppExchange Review**

One of the reasons we initially chose Salesforce was because of its compliance with Title 21 CFR Part 11. When we came to realize that we needed more than Salesforce for our projects we had serious concerns about what our solution would look like. We were thrilled to find out that Flosum is native to Salesforce and includes the same CFR compliance. With Flosum, we are confident that we are meeting the legislative compliance requirements. This app includes everything we need in the event of an audit, from signature management to electronic records. We can't take any unnecessary risks and with Flosum we have peace of mind.
