

UNIVERSITY

carahsoft

Higher Education Case Study

Partner Involvement:

Partner was instrumental in assisting with pricing strategy and advocating why F5 is the right choice.

Competitors:

Citrix, A10, Brocade

F5 Solution(s):

Traffic Management

Application Security

About the Customer:

One of the leading national public research and institution of higher learning. Existing F5 customer located in the Northeast with over 8,500 employees.

Customer Pain Point:

The University was pursuing a Multi-Cloud strategy selectively shifting workloads from on-premises to AWS. Their requirements were to create a next generation architecture able to optimize and secure application delivery in any cloud environment.

Solution:

F5's traffic management services were previously in use on-premises to front-end the University's Digital Learning Platform. Upgrading the architecture to support broader network traffic and adding application security services to their multi-cloud environment, through an F5-led proof of concept, was the winning strategy!

Customer Value:

Securing their network infrastructure ensures that students are able learn when and where they want, which is paramount for premier learning institutions. F5 provides consistent security, compliance, and performance regardless of where applications reside.
