

Abstract Security Offer to US Federal Government Purchase Guide

To receive pricing and/or to schedule an overview reach out to:
AbstractSecurity@carahsoft.com or (703) 230-7577

Agencies are paying twice for every log. Once to ingest it and once to index it. Abstract Security is a composable AI SIEM architecture built as four independent building blocks: Pipelines for security data collection, Detections in-stream, Data Lake for retention and AI-SOC workbench for security operations. Put Pipelines in front of the platform you already run, and it decides what actually needs to get there. Detection happens in-stream, at the moment of collection, before data reaches a billing meter. What is left over for compliance and forensics goes to the Data Lake at near-object-storage cost and stays instantly searchable.

Products offered as part of the promotion:

Products	Capabilities	Discount
Abstract's Full Platform Bundle	Provides pipelines, detections, data lake and SIEM — which comes to you as a single line item.	15% off full platform bundle 3 additional months delivered on any 12-month order executed before September 30th, 2026 - TOTAL: 32% off first year
