Cloud Compliance Made Easy

Benefit from a simplified, cloud-based data archiving solution with Arctera™ Cloud Archive.

As the amount of digital information generated by organizations continues to increase, traditional methods of archiving and data management are proving to be insufficient. The growth in unstructured data, such as emails, documents, and social media content, is posing significant challenges for companies. The volume of unstructured data is predicted to increase at an annual rate of 55-65%, with the amount of data generated globally expected to reach 180 zettabytes by 2025.¹

These trends are driving the need for a solution that can efficiently manage data archives, provide quick access to information, and reduce storage costs. Additionally, organizations must ensure compliance with regulatory requirements as data management becomes more complex. As a result, many companies are considering moving their archives to the cloud to benefit from scalable storage and advanced search capabilities.

Shift to the Cloud

Given the challenges posed by the ever-increasing volume of unstructured data, traditional on-premises archives are becoming insufficient for many organizations. Companies need a solution that can provide secure storage and advanced search capabilities to efficiently manage their data archives, reduce storage costs, and ensure compliance with regulatory requirements. Moving archives to the cloud is becoming an increasingly popular and essential move for many organizations looking to benefit from the advantages of cloud-based archiving solutions.

Arctera Cloud Archive is a cloud-based solution that offers a secure and comprehensive solution for archiving and managing data. It enables organizations to reduce the costs associated with managing their own on-premises infrastructure while ensuring their data is securely stored and readily accessible whenever needed. Arctera provides more advanced search capabilities when compared to other enterprise archives, which help organizations quickly find and retrieve the information they need and set retention policies to ensure regulatory compliance. Arctera is the ideal solution for organizations of all sizes that need to manage their data archives efficiently, reduce storage costs, and ensure compliance with regulatory requirements.

What's Needed is a Solution That:

- Simplifies archiving management and reduces required IT resources
- Provides faster and more accurate search capabilities to improve efficiency
- Offers flexible and customizable retention policies to meet regulatory requirements and reduce legal risks
- Reduces storage costs and overhead associated with on-premises infrastructure

Top Reasons to Choose Arctera Cloud Archive:

1. Simplified IT Management.

Managing on-premises infrastructure for data archiving can be a complex and time-consuming process that requires significant IT resources. With Arctera, customers no longer need to worry about managing their on-premises environment as the solution is cloud-based. This means that updates, patches, and new features are automatically applied, reducing the burden on IT teams to manage and maintain the infrastructure. Customers can focus on their core business activities while leaving the management of their data archive solution to the experts at Arctera.

2. Flexible Scalability

As organizations grow, their data archiving needs can change. Arctera provides flexible scalability options, allowing customers to easily expand their data archive storage as their needs change. With the ability to quickly add or remove storage capacity, customers can scale their data archiving up or down as needed. This flexibility eliminates the need to over-provision storage capacity, helping customers save costs while ensuring they have enough capacity to meet their needs.

Arctera Cloud Archive is a flexible solution that can be tailored to meet the specific needs of each organization. It provides a range of options for data retention, archiving, and storage, enabling companies to choose the best fit for their requirements.

3. Advanced Search Capabilities

With the volume of unstructured data expected to grow at an annual rate of 55-65%¹, finding specific information within on-premises archives in a timely manner can be a challenge. Arctera Cloud Archive offers faster, advanced search capabilities that help customers easily locate data within their archives. The solution's intuitive search interface allows users to search by keywords, date ranges, and other criteria, making it easier to find the information they need. Advanced search capabilities save time and improve productivity, allowing employees to focus on more important tasks and easily comply with legal and regulatory requirements.

4. Cost Savings

By moving data archives to the cloud, organizations can eliminate the need to purchase and maintain their own hardware and software. With Arctera, customers can benefit from a pay-as-you-go model that reduces upfront capital expenses. The cloud-based solution also provides economies of scale, allowing customers to benefit from lower operational costs. By reducing costs associated with managing on-premises infrastructure, organizations can allocate resources to other areas of their business.

Considering the expense of supporting on-premises infrastructure for data archiving, Arctera offers a cost-effective solution by eliminating the need for organizations to purchase and maintain their own hardware.

Comprehensive Data Compliance with Cloud Archiving

Experience the benefits of a simplified, cloud-based data archiving solution with Arctera. Benefit from reduced management complexity, predictable pricing, and automatic updates and patches. Don't let the hidden costs and complexity of on-premises data archiving hold you back from achieving your business goals.

As a leading provider of enterprise information archiving solutions, Arctera recognizes the significance of archiving to ensure effective data compliance and governance. That's why cloud archiving is a fundamental feature of the Arctera™ Data Compliance suite. Leverage the power of cloud archiving today with Information Governance, eDiscovery, and Surveillance.
