

Elastic

The Search Analytics Company

Elastic enables healthcare IT teams to transform massive amounts of data into actionable, mission-critical insights through a unified, scalable, and flexible search analytics platform. Driven by search powered AI, Elasticsearch delivers the speed, scale, and relevance needed for any data-centric use case, from customer experience to operational resilience to cybersecurity.

Why Elastic?

- **Observability:** Accelerate problem resolution with open, flexible and unified observability powered by advanced ML and analytics.
- **Security:** Automate protection, investigation, and response at scale using a unified solution with SIEM, EDR, and cloud security.
- **Search:** Build powerful AI and machine learning-enabled search applications for your constituents and employees.

In Carahsoft's Pavilion at HIMSS 2024, Elastic will showcase how their solutions support healthcare teams by:

- **Healthcare Data Management:** Elastic's solutions help healthcare organizations manage large amounts of data efficiently. This includes patient records, medical imaging files, sensor data from medical devices, etc., making storing and retrieving healthcare information quick and accurate.
- **Real-Time Monitoring and Analytics:** Elastic's stack enables real-time monitoring for healthcare systems and applications. Providers can leverage Elasticsearch, Kibana, and Beats to track patient outcomes, monitor vital signs and analyze population health data swiftly. This real-time insight allows for proactive decision-making to enhance patient care and operational efficiency.
- **Security and Compliance:** Security and compliance are paramount in healthcare due to the sensitive nature of patient data. Elastic's solutions help healthcare organizations ensure data security, meet regulatory requirements such as HIPAA and detect and respond to security threats and breaches. Features like encrypted communication, role-based access control, and anomaly detection contribute to maintaining the integrity and confidentiality of healthcare data.

Visit us at HIMSS 2024 on Thursday, March 14
