

# World-class capabilities for Canada's Federal Government

Google Cloud is committed to supporting a wide range of federal departments, agencies, and crown corporations so much so that we've secured the highly-coveted Framework Agreement for Secure Cloud from the Canadian federal government.

After an in-depth analysis of our relevant security, privacy, and usability standards, our Secure Cloud Framework Agreement gives our Federal and Crown corp customers the power to leverage Google Cloud's solutions to transform legacy systems and deliver more convenient and faster services to citizens and communities.

## Stay nimble on a flexible platform

 Fully-managed, serverless,  
and multicloud

No matter how you want to set up your infrastructure, Google Cloud has options that are easy to build and that deliver proven innovation.

 Multi-layered security

To earn the Framework Agreement for Secure Cloud from the Canadian federal government, hundreds of our security layers were analyzed one-by-one. That means you can rest easy storing citizen data on Google Cloud—from medical information to banking details, government benefits, and more.

 More efficient IT spend

Aging legacy systems cost money to maintain. Instead of investing in the upkeep of outdated technology, reduce those cost burdens by migrating to Google Cloud and gaining scalability and cost efficiencies by offloading your mainframe environment.

Google Cloud also gives you insight into and control of costs with specialized billing and management tools, and unique discounts available only for the public sector.

 Support that's close to home

Our dedicated Google Cloud Public Sector team in Ottawa and across the country are ready to support you. We have engineering offices in Waterloo, Montréal, and Toronto. We have a data region in Montreal, with another coming soon to Toronto.

We're here and proactively working to keep your infrastructure highly reliable, providing cyber analytics solutions, and helping you draw insights to predict community health needs. And, with our cutting-edge disaster recovery solutions, you'll never be caught off-guard.

 Experiences that Canadians expect

Much of Canada's private sector already harnesses the power of Google Cloud. This means your constituents are used to advanced digitization.

Now, we can work together to create an environment full of real-time data insights, AI and machine learning, better collaboration, faster app development, and the convenience of interoperability providing the same kind of consumer experience they've grown to expect from Canadian government.

 Let's get solving

Google Cloud and our network of partners are ready to help turn your transformation goals into reality.
