OpenText Fortify On Demand

OpenText™ Fortify™ On Demand is a cloud-based service that delivers application security testing, vulnerability management, and AppSec compliance.

Benefits

- Comprehensive AppSec service without adding infrastructure
- Built for DevSecOps with easy to use dashboards
- Ability to quickly launch compliant AppSec initiatives
- Ideal for midmarket organizations

Do you have assurance your applications are secure and compliant? Does your organization have defined AppSec processes in place to ensure application security? The rise of cloud and mobile platforms and the increase in security incidents due to application code defects are growing concerns. Plus, 96% of applications have third-party or open-source components, which adds even more risk.

Fortify On Demand reduces the risk and cost of defects with expert security testing, vulnerability management, and customer support. Embedding AppSec testing early in the software development lifecycle helps you find and fix issues before your applications are in production. And with a managed AppSec service, you can leave the security and compliance work to the experts while you focus on your core business.

Comprehensive service without adding infrastructure

Schedule application security assessments in an interactive, web-based management portal. Then review results on visual dashboards and reports. And when you use a cloud-based managed service, you avoid the hassle and expense of maintaining infrastructure.

Built for DevSecOps

We will be able to migrate any legacy vaulting environment to modern standards without disrupting business operations. We offer vault upgrade and replacement services for any customer who may have outgrown their licensed data footprint.

Data Protection and Backup Plan

Keep pace with the everything-as-code era without sacrificing application quality and security:

- Enjoy a wide breadth of integrations and extensions into your AppSec ecosystem.
- Implement shift-left security for next-gen architectures.
- Get accurate, reliable, and actionable results.
- Centrally manage real-time reporting and dashboards.

Ability to quickly launch AppSec initiatives

Launch your application security initiative in just one day. With Fortify On Demand, you can:

- Scale rapidly and ensure AppSec compliance, with a low barrier for adoption.
- Access security expertise with 24x7 testing and support.
- Focus on core business while maturing your AppSec program.

Ideal for midmarket organizations

Mature your AppSec program at your pace with capabilities that help you meet your program goals. Integrate application security and compliance into the fabric of your organization as you scale the number of apps Fortify On Demand covers.
