

# Fake your data

Turbocharge development and streamline compliance with high-fidelity test data

Rapid access to quality test data is a critical component of today's CI/CD workflows. Without it, developers face delayed release cycles, bugs in production, and the burden of maintaining ineffective workarounds that are an endless drain on resources—not to mention the risky “workaround” of using sensitive production data in lower environments.

**Build better, faster, and safer** by hydrating your environments with high-fidelity test data from Tonic, the all-in-one platform for data masking, subsetting, and synthesis built for today's developers. Through an intuitive UI and extensive database support, Tonic makes it easy to generate realistic test data on demand that looks, acts, and feels like production data because it's made from production data.

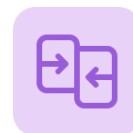

Get quality products to market faster by eliminating the overhead of outdated, legacy approaches to test data management, and save your team time, money, and undue risk by streamlining data governance at enterprise scale.

## Realistic data to drive productivity

### Input-to-Output Consistency

Mask data consistently across databases to maintain referential integrity between primary and foreign keys.

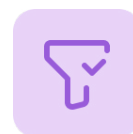

### Dependency linking

Capture critical relationships in your data with column linking and partitioning.

### 50+ data type generators

Synthesize complex scenarios no matter the data type, sensitivity need, or downstream use case.

### Multi-database subsetting

Target your use cases with referentially-intact, cross-database subsets sized to your needs.

THE FAKE DATA COMPANY

## Built-in privacy to simplify compliance

### Privacy reports

Monitor the level of protection achieved and maintain records of every data generation run.

### Schema change alerts

Stop sensitive data from leaking into lower environments with automated schema change detection.

### Workspace management

Streamline privacy settings across your organization with Workspace Inheritance, RBAC, and collaboration features.

### Self-hosted deployment

Keep your data at its source by deploying Tonic self-hosted to your own VPC or even air-gapped.

Tonic is quick to deploy, easy to use, and integrates seamlessly into our software development life cycle without creating any extra work. It's been a huge win for Flexport, from our security team to infrastructure to our engineers. Thanks to Tonic, we're equipped with the real security we need to meet compliance obligations and safeguard our customer's privacy.

## Extensible connectivity to maximize efficiency

- ✓ Native support for leading SQL and NoSQL databases and data warehouses
- ✓ Fully accessible by API
- ✓ Automated integrations with webhooks
- ✓ Post-job scripts for further customization

Build without bottlenecks, de-identify without compromises, and iterate faster with better test data.
