
# Secure Your Institution – and its Legacy

## One Autonomous Platform Built to Protect the Pursuit of Knowledge

Thank you for downloading this SentinelOne Solution Brief. Carahsoft is the distributor for SentinelOne's Cybersecurity solutions available via GSA, ITES-SW2, NASA SEWP V, and other contract vehicles.

To learn how to take the next step toward acquiring SentinelOne's solutions, please check out the following resources and information:

For additional resources:
carah.io/SentinelOne-Resources

For upcoming events:
carah.io/SentinelOne-Events

For additional SentinelOne solutions:
carah.io/SentinelOne-Solutions

For additional Cybersecurity solutions:

# Secure Your Institution—and Its Legacy

## One Autonomous Platform Built to Protect the Pursuit of Knowledge

With open access for students, alumni, faculty, and staff, every campus connection carries risk. Higher education institutions operate as sprawling, decentralized digital ecosystems, making them prime targets for cyberattacks. A single successful attack could disrupt learning, tarnish an institution's reputation, and result in catastrophic financial and data loss. Adversaries recognize that the repositories of sensitive data—including PII, intellectual property, and federally-funded research—create high-value opportunities for widespread disruption and data theft.

The shift to remote learning, open collaboration and the prevalence of BYOD policies has dissolved the traditional perimeter, creating a myriad of unsecured devices connecting to campus networks. As a result, understaffed security teams remain challenged to defend an expanding campus attack surface with limited budgets—and strained resources.

SentinelOne's Singularity™ Platform safeguards your people and valuable IP against attacks with AI-powered, autonomous defense across every surface—from laptops, servers and cloud workloads to research lab systems and IoT devices. By unifying security across diverse campus environments, SentinelOne empowers higher education institutions to increase resilience, eliminate blind spots, and streamline compliance with key standards like GLBA—giving the advantage back to defenders.

### The Purple AI Advantage[1]

**63%**
Faster to identify security threats

**55%**
Faster to remediate security threats

**338%**
Return on Investment

## SentinelOne Empowers Your Academic Institution

### Automate Your Defense

Outpace attackers using AI-driven, autonomous detection and response to stop threats in real time—without human intervention. Empower understaffed security teams by automating threat detection, response, and remediation, allowing analysts to focus on critical tasks instead of being burdened with manual work.

### Uplevel Your Team

The Singularity™ Platform automates routine tasks and enriches threat data with context, eliminating hours of manual triage. Force multiply your security team with Purple AI, our generative and agentic AI security assistant, to surface and investigate threats faster before they become campus-impacting events. Upskill junior analysts to keep pace with cyber threats despite training, budget and staffing constraints.

### Remove Data Silos

SentinelOne breaks down silos by unifying data across disparate security tools, networks, and devices into a single console. This provides complete visibility across all attack surfaces—from administrative workstations and remote learning platforms to cloud-based research environments and student information systems. By correlating data from across the entire academic ecosystem, we eliminate blind spots and provide the context needed for comprehensive defense.

### Stay Compliant for Less

SentinelOne helps you meet and maintain compliance to keep sensitive student data and federally funded research protected. Our platform provides the visibility and control needed to streamline compliance with key standards like GLBA, FERPA and CMMC by simplifying audit and attestation processes.

## Why Choose SentinelOne?

- Autonomous, AI-powered defense
- Visibility across all data and tools
- Patented 1-click ransomware remediation and rollback to ensure operations continuity
- Supports multi-tenant environments
- No-code Hyperautomation to streamline SecOps
- Low-risk, safe deployment and migration to support campus operations
- Complete modern and legacy coverage for Linux, macOS, Windows, Kubernetes, and Docker
- Cloud protection from buildtime to runtime
- Supports on-prem/air-gapped deployments
- Native identity-based threat detection, response, and risk management
- Automated event correlation into Storylines to accelerate investigations and root cause analysis
- Full alignment with MITRE ATT&CK® framework
- Flexible data retention (14-365+days) to meet compliance and forensic needs

## When it comes to protecting your campus, compromise isn't an option.

The SentinelOne Singularity™ Platform delivers unified, AI-powered defense across end-point, cloud, and identity to protect your most valuable asset—institutional trust.

About SentinelOne

SentinelOne is the world's most advanced cybersecurity platform. The SentinelOne Singularity™ Platform detects, prevents, and responds to cyber-attacks at machine speed, empowering organizations to secure endpoints, cloud workloads, containers, identities, and mobile and network-connected devices with intelligence, speed, accuracy, and simplicity. Over 11,500 customers—including Fortune 10, Fortune 500, and Global 2000 companies, as well as prominent governments—all trust SentinelOne to Secure Tomorrow.
