SYMANTEC IDENTITY SECURITY PLATFORM • IDSP

Simplify enterprise IAM.

Operationalize Zero Trust.

The Symantec Identity Security Platform (IDSP) brings authentication, identity services, and authorization together in one cloud-native control plane — replacing fragmented IAM tools to secure every identity across the entire employee lifecycle.

One Identity Platform

Every identity, credential, and policy in a single cloud-native control plane.

Unified IAM

Authentication, authorization, and federation converge into one service.

Zero Trust Ready

Every access decision verified continuously against real-time context.

WHAT IDSP DELIVERS

Six capabilities. One platform.

Passwordless Authentication

FIDO2 passkeys, security keys, and biometrics for phishing-resistant, faster sign-in.

Risk-Based Adaptive Access

Real-time risk scoring steps up assurance only when device, location, or behavior demands it.

Federation & Single Sign-On

Standards-based SAML, OAuth 2.0, and OIDC — one secure identity across every application.

Automated Lifecycle (JML)

Joiner, mover, leaver, and rehire transitions provisioned straight from HR via SCIM.

Self-Service Recovery

MFA-verified password reset that cuts help desk tickets, costs, and user downtime.

Aligned to NIST 800-207

A policy engine mapped to the Zero Trust reference architecture: PIP → PDP → PEP.

THE BUSINESS VALUE

Lower

help desk & reset costs

Phishing-resistant

security by default

Faster

cloud & app adoption
