Unified AI for the
Forescout 4D Platform™

Thank you for your interest
in exploring this content.

Carahsoft is the **Trusted Government IT Solutions Provider**® supporting a broad portfolio of industry-leading technologies through GSA, NASA SEWP V, ITES-SW2 and a wide range of other contract vehicles.

As the **Master Government Aggregator**®, Carahsoft connects government agencies, industry partners, and technology providers to deliver innovative, mission-focused solutions.

In partnership with Forescout, we provide technology solutions that drive modernization, strengthen operations, and ensure compliance with evolving government standards.

SOLUTION BRIEF

Forescout VistarAI™

Unified AI for the Forescout 4D Platform™

Designed to help you think, decide, and move faster.

Forescout VistarAI™ is our innovative, unified AI technology built into the Forescout 4D Platform™ experience. It keeps information relevant, makes next steps feel intuitive, and ensures advanced capabilities are accessible to every user.

Inspired by the Italian word *vista* – and the ability to see beyond what is immediately obvious – VistarAI extends your perspective when the signal gets lost in the noise. It doesn't replace your judgment. It works alongside you – expanding your reach while you make the decisions that matter to you and your role.

VistarAI spreads across roles, moments, and daily tasks to reduce friction in the work itself, not just optimize what tools can do. You see the difference in how your day takes shape, so you can spend less time figuring out where to start and more time focused on execution. Get to the answers you need faster and know exactly how your work is being presented and understood.

'My Day' Starts with Direction

Start your day knowing exactly where to begin. Your work will be already organized into clear, actionable priorities focused only on what has changed, what matters now, and what requires attention today.

My Day delivers a personalized, persona-based user experience that surfaces meaningful events across assets, vulnerabilities, risk exposure, and compliance. Instead of a generic dashboard showing the same information to every user, it structures work around roles, responsibilities, and active workflows. Tasks are organized according to what each function is accountable for: event investigation, exposure reduction, policy enforcement, compliance validation, and operational stability. Priorities are sequenced by risk, threat relevance, asset criticality, and business impact – enabling teams to move directly from visibility to execution.

The result is a focused, contextualized plan for the day.

Behind the scenes, Forescout VistarAI™ applies pre-programmed security skills that embed investigation logic directly into the workflow. This is not a chatbot and it does not rely on prompt engineering. VistarAI understands your role and your environment, continuously evaluating asset intelligence, vulnerabilities, risk posture, and threat context to guide structured next steps.

Recommendations are grounded in customer data and executed within a human-in-the-loop framework – VistarAI recommends, you decide.

FIRST SKILLS-BASED AGENTIC AI FOR SECURITY OPERATIONS

Forescout VistarAI™ is the first skills-based agentic AI suite purpose-built for cybersecurity, delivering pre-programmed security expertise with human-in-the-loop control. It turns security signals into organized, persona-driven work – without prompts or chatbot-driven workflows.

VistarAI adapts to the responsibilities behind the console. Available roles include: **Network Operator, Network Security Analyst, SOC Analyst, Security Manager, Biomedical Engineer, and Compliance Officer**, each with priorities and operational workflows aligned to their responsibilities.

AI-POWERED THREAT INTELLIGENCE

Vedere Labs integrates AI to transform proprietary threat research into actionable context. Indicators of compromise and adversary techniques are mapped to the MITRE ATT&CK framework, making specialized intelligence immediately usable during investigation and response.

AI EMBEDDED ACROSS THE FORESCOUT 4D PLATFORM™

- ▶ Deep Asset Visibility to interpret device behavior within operational context.
- ▶ Compatibility Detection to uncover configuration drift and role misalignment.
- ▶ Context-Aware Detection to assess events in light of their operational impact.
- ▶ Threat Intelligence Correlation to connect observed activity with known TTPs and adversary behavior.
- ▶ Attack Path Analysis to reveal how threats could propagate across interconnected systems.
- ▶ Continuous Risk Analysis across enterprise and operational environments.

Ask What You Need to Know

Finding what you need shouldn't require mastering syntax or remembering how the platform is structured. You ask VistarAI questions in your own words, and the answer is grounded in your environment and context. **Natural Language Search** removes the barrier between intent and insight, allowing you to explore complex data without switching mental models or learning query logic. Just ask questions like: "Show me any internet-facing assets vulnerable to RDP exploits with activity detected in the last 24 hours".

Insights Matched to the Role

Gen-AI Reporting turns security findings into structured narratives tailored to those who need to understand them. The same underlying data is shaped differently depending on the audience. Analysts see technical depth and supporting evidence. Leaders see risk trends, exposure shifts, and performance indicators. Executives see impact, priorities, and direction. One source of truth, expressed in the language each role needs to act with confidence.

Fore Scout applies AI responsibly and transparently. Customer data is never used to train models, and every recommendation is grounded in traceable logic, ensuring outcomes are explainable and accountable.

Fore Scout VistarAI™
transforms the
4D Platform™ experience
by structuring daily work,
removing barriers between
questions and answers —
making communication
clearer while keeping
human judgment at
the center.

Experience VistarAI in the Fore Scout 4D Platform™ today.

About Fore Scout

For over 25 years, organizations and governments worldwide have trusted Fore Scout to secure their networks. From pioneering Network Access Control (NAC) to delivering Universal Zero Trust Network Access (UZTNA), Fore Scout leads the evolution of enterprise network security across IT, OT, IoT, and IoMT environments. The Fore Scout 4D Platform™ delivers comprehensive asset intelligence, continuous risk assessment, and dynamic control, over all managed and unmanaged assets, enhanced by the proprietary threat intelligence research of Vedere Labs. Leveraging agentic AI workflows with human-in-the-loop actions, Fore Scout continuously analyzes threats, orchestrates response, and integrates seamlessly with 180+ security and IT products.
