DATASHEET

## Fortra Cybersecurity

Fortra delivers AI-amplified cybersecurity solutions that help organizations use and protect data with confidence. Powered by purpose-built AI, highly unique data sources and intelligence, and modular delivery, Fortra enables organizations to reduce AI risk, identify threats faster, and strengthen their cyber posture. Over 18,000 global customers trust us to protect their data and brand, expose weaknesses, and test their defenses.

### PROTECT AI USAGE

Fortra enables safe and confident use of GenAI by protecting against data exposure and guiding secure innovation. Our solutions prevent data leakage across 150+ AI tools, uncover shadow AI usage, and safeguard sensitive assets like source code. They also enforce compliant AI use through real-time user guidance while identifying and exposing AI-related risks.

### PROTECT AGAINST AI THREATS

Fortra accelerates threat detection by combining uniquely integrated data sources with exclusive AI models, an open intelligence network, and expert-driven insights. These capabilities are continuously refined through feedback loops, third-party integrations, and centralized indicators of compromise to improve accuracy. Bi-directional threat intelligence sharing with global law enforcement further enhances visibility into emerging threats.

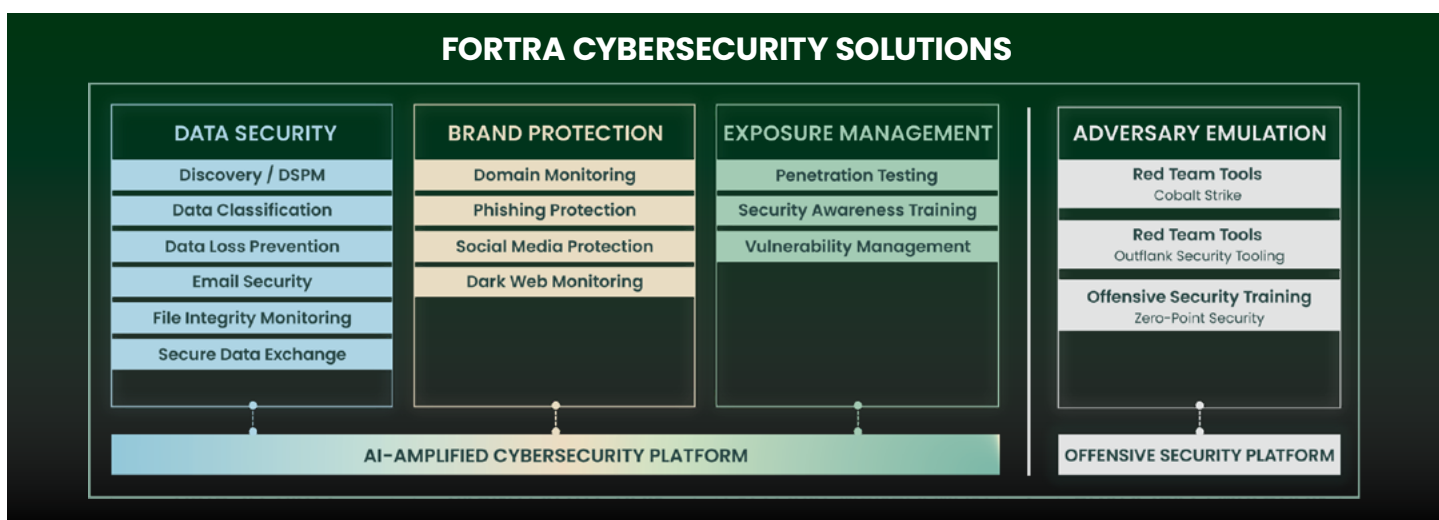

Additionally, cutting-edge research from over 400 Fortra Intelligence and Research Experts (FIRE) ensures a constant stream of actionable threat intelligence.

### STRENGTHEN CYBER POSTURE WITH AI-POWERED SOLUTIONS

Fortra brings cybersecurity solutions together in a modular AI-powered platform designed to address customers' needs today and scale for future growth. Interoperable modules across data security, brand protection, and exposure management deliver comprehensive coverage. AI-driven capabilities enhance analysis, classification, detection, and operational efficiency across the platform. Flexible deployment options, plus tiered packaging and discounts ensure adaptability for a wide range of customer needs.

A separate adversary emulation platform gives organizations industry-leading red team tools to simulate attackers and test their defenses.
