Integrations

With Wickr, all user data is encrypted on the sender's device and only the recipient can access it. Nobody else has the keys to decrypt your conversations or documents, including Wickr. Your communications are not stored on a server and you control how long each message and file lives. Always.

Protect Against Business Email Compromise (BEC)

According to the FBI, BEC crimes accounted for $1.77 billion in losses in 2019

Wickr utilizes simple user verification, so no one can impersonate a coworker or mask their identity. Wickr verifies that you are who you say you are, and that who you are sending something to is also who they say they are. You will also be alerted if someone is "Out of Network" to ensure that you are only sharing valuable information with the appropriate parties.

Simplify and Secure Your Organization's Communication

Productivity increases by 20 to 25% in organizations where employees are connected

Many organizations use multiple platforms to handle email, teleconferencing, messaging, file sharing, location sharing, and more. Wickr can not only handle all of these functions in a single application, it can do so with full end-to-end encryption.

Wickr is the only collaboration service with full functionality to meet all security criteria outlined by the National Security Agency

Service	1 – End-to-End Encryption[5]					2 – Testable Encryption	3 – MFA	4 – Invitation Controls	5 – Minimal 3rd Party Sharing	6 – Secure Deletion	7 – Public Source Code Shared	8 – Certified Service (FedRAMP / NIAP)
