SOLUTION NOTE

Infoblox Threat Defense™
Fast Track Program

Built for Federal Missions. Designed for Simplicity.

OVERVIEW

Federal agencies face relentless cyberattacks leveraging domains—phishing, spoofing and command and control—to compromise systems and exfiltrate sensitive data. Traditional defenses often miss these domain-based threats, making DNS-layer intelligence a cornerstone of any Zero Trust strategy.

The Infoblox Threat Defense™ Fast Track Program delivers enterprise-grade DNS-layer protection in a lightweight, cost-efficient and high-value model that ensures no customer data is sent to Infoblox.

Operating entirely within the Infoblox Portal, this program enables agencies to gain immediate visibility and actionable insight, without complex integrations, infrastructure changes or data exchange.

It is the fastest way to experience the power of Infoblox Threat Intelligence, Lookalike Domain Monitoring and Domain Mitigation, empowering agencies to strengthen defenses in hours, not weeks.

WHY CHOOSE THE THREAT DEFENSE FAST TRACK PROGRAM

1. Instant Protection. Zero Complexity.

- No infrastructure and no data sharing mean immediate activation. Agencies instantly gain domain-level visibility, threat intelligence and automated protection to safeguard critical missions.

2. Cost-Efficient, Mission-Ready Defense

- A flexible, token-based model allows agencies to focus on protection where it matters most-threat prevention and mitigation-and configurable ecosystem integrations supercharge your existing investments.

3. Proven Infoblox Intelligence

- Powered by Infoblox's trusted threat intelligence ecosystem, the program combines three best-in-class capabilities to deliver actionable insight and automated defense against real-world domain threats:
  - *Dossier* Threat Intelligence portal for investigation and analysis
  - *Lookalike Domain Monitoring* for proactive brand and domain defense
  - *Domain Mitigation Services* for rapid suspension of malicious domains-the same service previously offered under the Cybersecurity of Infrastructure Security Agency's Shared Cybersecurity Services' activity

4. Scalable and Flexible Architecture

- As federal missions evolve and threats change, the program scales and adapts easily to maintain continuous protection.

5. Compliance-Aligned Framework

- Aligned with the Office of Management and Budget (OMB), National Institute of Standards and Technology (NIST), and Cybersecurity and Infrastructure Security Agency cybersecurity frameworks, it helps agencies reduce risk and meet compliance requirements without complex integrations or additional operational overhead.

WHAT THE THREAT DEFENSE FAST TRACK PROGRAM INCLUDES

Capability	What It Does	Value Delivered to Federal Agencies	Included in Program
Threat Defense Tokens	Flexible credits for Infoblox services (Dossier and Lookalike Monitoring).	Allows agencies to customize protection for evolving mission needs and threat landscapes.	2,000 tokens total (≈1,000 used monthly for Dossier).
Domain Mitigation Services	Identifies and suspends malicious or fraudulent domains that target agencies or their citizens.	Prevents phishing, spoofing, and data theft; average takedown within 24 hours.	100 mitigations included.
Lookalike Domain Monitoring	Detect domains that mimic government, agency, or trusted partner names.	Protects public trust and agency reputation by preempting impersonation and fraud.	Monitors ~25 domains.
Dossier Threat Intelligence Portal	Aggregates and correlates intelligence from global sources for real-time threat investigations.	Provides instant insights to detect and block domain threats faster and more accurately.	25 queries/day (~1,000 tokens/month).
Zero-Configuration Deployment	Lightweight, cloud-enabled onboarding.	Fast deployment; no data sharing required.	✓ Included

ALIGNMENT WITH FEDERAL CYBERSECURITY PRIORITES

The Infoblox Threat Defense™ Fast Track Program is delivered through the Infoblox Portal, which provides each customer with an isolated, secure tenant. No customer data, telemetry, or traffic is sent to Infoblox or stored outside the customer's environment.

While hosted in the Infoblox Portal, the program is architected to align with key federal cybersecurity frameworks and modernization objectives, helping agencies advance Zero Trust, improve DNS security hygiene and strengthen incident response in accordance with OMB, NIST and CISA guidance.

Framework/Mandate	Key Objective	How Fast Track Supports
OMB M-22-09 (Zero Trust Strategy)	Extend Zero Trust to DNS, data and devices.	Applies Zero Trust principles at the DNS layer, detecting and blocking malicious domains before connection.
OMB M-19-26 (TIC 3.0)	Strengthen visibility and control across hybrid environments.	Provides DNS telemetry consistent with TIC 3.0 to improve visibility and control.
NIST SP 800-81 Rev. 3	Secure DNS and use it as a policy enforcement point.	Enables DNS-based blocking and domain mitigation to protect network integrity.
CISA DNS Best Practices and ICANN Guidance	Reduce DNS abuse and phishing risk.	Enhances DNS hygiene and accelerates domain takedown response.

FROM FAST TRACK TO FULL DEFENSE

This is not just a starter kit—it is a launchpad for Zero Trust success.

The Infoblox Threat Defense™ Fast Track Program equips federal organizations with the foundational visibility, intelligence and rapid mitigation they need, with no customer data ever transmitted to Infoblox.

As mission needs evolve, agencies can extend their capabilities into Infoblox NIOS-based local DNS firewall rules and integrate DNS intelligence into security information and event management (SIEM)/security operations center (SOC) workflows when ready.

Detect. Disrupt. Defend.

See the value. Scale with confidence.

Contact us at info@infobloxfederal.com to schedule a 45-minute Protective DNS Inspect or a customized Security Workshop aligned to your environment and mandates.
