Stronger identity security compliance for SLED

State, local, and education (SLED) agencies are under constant cyber threats from ransomware and extortion to system hacking and data breaches. Meanwhile, agencies and institutions are dealing with an expanding hybrid workforce—remote staff, field employees, and a growing base of contractors—who all need access to applications, systems, and data on-premises and in the cloud. As a result, cybersecurity is the number one concern for SLED agencies.

To increase your agency's cybersecurity posture, you need to manage the complexity of the evolving workspace. Modernizing and automating inefficient systems speeds up identity security processes and reduces third-party risk and IT burden. With a modern approach to identity security, agencies can benefit from:

- Implementing artificial intelligence (AI) and machine learning (ML) can automate identity security and alleviate time-consuming manual processes
- Maintaining continuous compliance by enabling more accurate access certification decisions
- Automating audit reports and dashboard KPIs
- Providing robust identity security access controls and reporting to mitigate rising cybersecurity insurance costs

Comprehensive identity security that scales

SailPoint Identity Security Cloud can help you develop a comprehensive and scalable identity security solution. By using a unified and scalable identity security framework, SailPoint's industry-proven platforms can simplify and streamline the complexity of compliance management.

WHO ARE SAILPOINT CLIENTS?

- ▶ **8 out of the 10** largest states in the U.S., including Illinois, Indiana, Virginia, California, and Texas
- ▶ **More than 25** research institutions, including Harvard and Yale

SailPoint Identity Security Cloud

With SailPoint Identity Security Cloud, you have the clarity of knowing what components you need and the simplicity of procuring them together. It's a less complex approach to ensuring a critical capability. The platform is built around three foundations to ensure that your mission-critical identity program complies with current policies and can scale as standards evolve.

The foundations are:

- **Unmatched intelligence:** Built-in artificial intelligence provides you with 360-degree visibility, insight, and remediation, so you can adapt and ensure the security of every identity's access
- **Frictionless automation:** Customizable workflows automate and streamline identity processes to better discover, manage, and secure each user's access, freeing your staff to focus on innovation, collaboration, and productivity
- **Comprehensive integration:** Seamlessly connect your entire ecosystem through thousands of integrations

AI and ML-based user onboarding and offboarding help streamline the assignment of resource access permissions efficiently and effectively. This helps your agency achieve operational excellence with faster workflows and reduced third-party risk, freeing up your HR or IT teams to do other critical work.

State, local, and education agencies are accelerating their modernization with AI-driven automation solutions. Contact us to learn how SailPoint can help you develop an identity program that can scale to meet the needs of your agency. About SailPoint

SailPoint is a leading provider of identity security for the modern enterprise. Enterprise security starts and ends with identities and their access, yet the ability to manage and secure identities today has moved well beyond human capacity. Using a foundation of artificial intelligence and machine learning, the SailPoint Identity Security Platform delivers the right level of access to the right identities and resources at the right time—matching the scale, velocity, and environmental needs of today's cloud-oriented enterprise. Our intelligent, autonomous, and integrated solutions put identity security at the core of digital business operations, enabling even the most complex organizations across the globe to build a security foundation capable of defending against today's most pressing threats.
