Technical Brief

CONTEXTUALIZED FINDINGS

Problem

Security analysts waste hours investigating each alert, manually searching across systems to understand scope and impact. They check network logs, then endpoint data, then infrastructure records - piecing together fragments. By the time they understand what happened, attackers have moved on. Most alerts expire uninvestigated due to time constraints.

Galvanick's Unique Approach

Galvanick automatically enriches every detection with complete context from all data sources, delivering comprehensive findings and suggested actions in seconds.

Our platform performs investigation work equivalent to a world class OT SOC team without human input.

Technical Differentiators

- Automated contextualization: Enriches findings with relationships, attribution, process lineage.
- Complete findings: Links events to assets, users, processes, and historical patterns automatically.
- Actionable recommendations: Provides specific next steps based on comprehensive analysis.
- Interactive validation: Queries users directly.

Why This Matters

When an alert fires at 3 AM, your team needs complete context immediately. What triggered this? What else happened? Which systems are affected? Raw alerts waste precious time. Galvanick delivers fully contextualized findings - transforming hours of manual investigation into seconds of actionable intelligence.

For security teams drowning in alerts, Galvanick is the only platform that automatically contextualizes every detection across all data sources, delivering complete findings with recommended actions instantly.
