Lineaje SBOM360

What's in your software?

SBOM360 is a comprehensive software supply chain security management tool for software builders of in-house or commercial software. It supports various software types, including cloud applications, SaaS, COTS and appliances. With SOMB360, software producers can manage software supply chain risks across their, ensuring security, compliance and operational efficiency
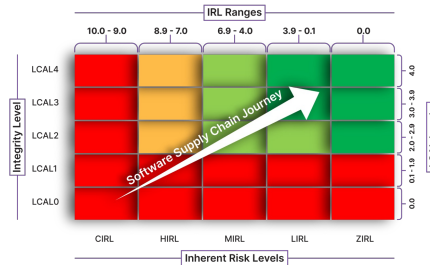

Key capabilities

Discover your entire supply chain tree

Gain visibility into all software components including open-source, private, or third-party, within minutes. Easily decompose images, binaries, and source code using simple integrations or our free SCA/discovery CLI.

Establish independently verifiable provenance (LCAL)

Ensure the integrity of your shipped software, by verifying what you built matches what you sourced, and what your dependents shipped. What they shipped is what they built and so on. All verifiable by anyone.

Understand the inherent risk your dependencies drag in(IRL)

Continuously assess software components for risks such as vulnerabilities, code quality, security posture, maintainability, provenance, geographical dependence, and author reputation etc.

Establish software supply chain policy control

Set component policies and instantly detect violations. Simplify management of complex software supply chain with automated DevSecOps actions and receive developer recommendations

Integrated search

Streamline the search for vulnerabilities, licenses, provenance, supplier details and more across all your SBOMs enhancing operational efficiency.

Centralized SBOM management

Achieve centralized SBOM version management and maintenance for all your applications and components

Publishing privately or publicly

Effortlessly auto-publish compliant Product SBOMs with evidence as mandated by Executive Order 14028 publicly, or privately.

Four ways to get value from SBOM360

Connect to your container repository

Understand container composition and link OSS, third-party and private components

Connect to your source-code repository

Gain complete integrity and inherent risk levels for your private components.

Have a SCA output? Upload your SPDX or Cyclone DX

Gain complete integrity and inherent risk levels for your private components.

Don't know what's in your software? Just upload your product

SBOM360 generates a complete view of your software, and the supply chain risks

Executive Order

The White House issued Executive Order 14028 in May 2021 to improve the nation's cybersecurity. It strengthens defenses against cyber threats for federal networks and promotes collaboration between government and private sectors. It mandates software vendors to publish an attestation letter outlining software components and associated evidence, and requires federal agencies to assess risks when buying software from vendors. SBOM360 publishes all compliance artifacts necessary to comply with Executive Order 14028.

Who Uses SBOM360

Product security teams who strive to achieve a trusted software supply chain, and comply with Executive order 14028

DevSecOps teams and developers who want to minimize supply chain risks,and safeguard their software from compromise by threat actors.

Open-source office who want to only use the best open-source components in their software.

About Lineaje

Lineaje provides comprehensive software supply chain security management for organizations that build, use or sell software.

SBOM360 is the industry's first SBOM manager. Organizations can discover their software supply chain, assess its integrity & inherent risks, and drive continuous improvement across their portfolio of applications. SBOM360 Hub is the industry's first private & secure SBOM exchange for the software distribution chain.

Lineaje's Accolades

Best Software Supply Chain Product

Best Cybersecurity Startup

Best Software

2023 Application Security
