Modern, intelligent software packaging & deployment

- ✓ Automate software deployment
- ✓ Reduce helpdesk tickets
- ✓ Improve your vulnerability management process
- ✓ Increase efficiency and enhance compliance

Add Aiden to your team & reduce packaging time to 48hrs.

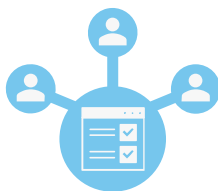

Every company is independently solving the same packaging and software deployment problems. Get ahead of the neverending cycle:

- ✓ Increase ransomware resilience
- ✓ Keep every computer up to date and in compliance
- ✓ Enable IT to focus on high-impact high-visibility projects

How Aiden works

We provide a service and AI bot to achieve and maintain your desired state.

We document your desired state configurations

We provide everything needed to get to that ideal state

We provide an AI Bot to maintain desired state

- Using your software deployment tool, the AidenBot uses your plain English policy to deploy intelligent packages on all Microsoft Windows servers and user computers automatically.
- The AidenBot keeps all software and firmware updated on each machine and builds computers to desired state configuration from bare-metal replacing the need for legacy imaging and task sequences.
- Aiden's managed service brings the collective experience from years of packaging engineering across multiple customers and industries.

The fully-inclusive managed solution that provides Windows deployments with endless security updates, including OS, COTS and third-party applications, BIOS and firmware, all customized for your environment.

Aiden solves:

Vulnerability patching - proactively remediate CVEs

Software deployment - ensure third-party applications are configured to your requirements.

Bare-metal deployments - build devices programatically, without maintaining images or manual procedures.

Desired state configurations - automatically adds, removes and reconfigures software, and updates firmware.

Testing requirements - new software and packages are rigourously tested and validated prior to deployment to your lab environment

What is installed:

Not an agent - The AidenBot uses your deployment tool's agent to deploy packages to endpoints, and deletes itself once done.

Private library - Aiden keeps a private, secure software package library, accessible and customized for your environment, synced from our central hub in Azure.

System requirements:

Windows Vista or later - Aiden supports all versions of Windows since Vista and Server 2008.

Universal integration medium - AidenBot is a portable application that layers on top of any deployment tool.

**75%**

Fewer IT support tickets

“ Aiden has increased the speed and efficiency at which we're able to do things and with what we already have.

We didn't have to re-create the wheel.

It's a game-changer for us. ”

- IT Manager,
Global Translation Services Provider

**95%**

Reduction in time spent deploying computers
