FINANCIAL OPERATIONS MODULE

# Grant Management Use Case ↘

The Palantir Platform provides a streamlined integration of individual grant level data—along with budget and financial source systems—into a single, comprehensive solution.

*Dashboards provide high level views of grants to senior leaders.*

---

## 01 — The Problem

A critical challenge in grant management involves harmonizing the complex web of data and coding schemes that are needed to track the funding process and grant performance. Understanding and managing this work involves integrating and analyzing data on grant applications, performance, funding dollars, organizational overhead, personnel and more. This work needs to be replicable, timely, and transparent, while respecting the sensitivity of the data.

---

## 02 — The Solution

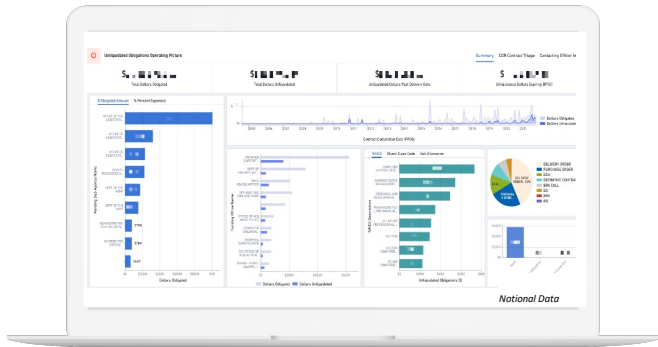

The Grant Management Use Case provides senior leadership transparent visibility into which programs are funded, how specific programs perform, and the outcomes and achievements of a grant. Leaders can use this information to enact agile reallocation decisions. High-level or aggregated information can be disseminated to wider audiences while sensitive data (e.g., grant application acceptances/rejections, funding dollars, etc.) can be distributed to narrower groups.

Visibility into financial flows allows agencies to correct discrepancies before audits begin to save on the enormous cost of conducting audits.

---

— The Palantir Financial Solutions Suite unifies financial data across silos, systems, and functions without a full system migration — creating a collaborative, secure foundation for financial management professionals to analyze portfolios, track budgets, and intelligently reallocate funds. —

# Features ↘

Users can drill down into grants data as their access permits.

## → Financial Data Fabric

A single, consolidated source of grant details from across public and private sources.

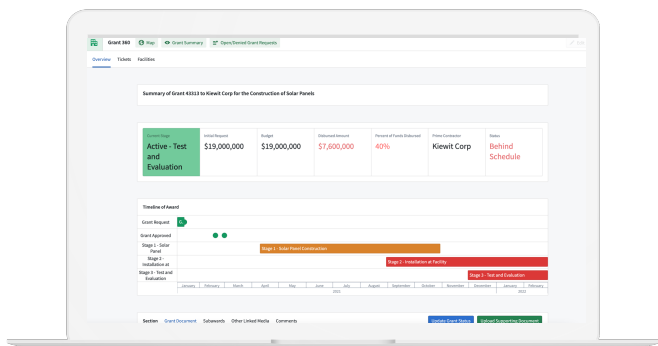

## → Grant Explorer

Interactive application that enables users to quickly report on key information.

## → Alerting Engine

Powerful AI/ML and rule-based alerting that empowers users to proactively address issues.

# A Large Federal Agency ↘

Working with a large federal agency, Palantir's Grants Management Use Case was deployed and operational within 14 days. By bridging grant and funding data, the agency created a cohesive data foundation which allowed for the granular investigation and tracking of grants across numerous geographies and classes of grants.

As an immediate result, the agency was able to identify and eliminate potential fraud within tens of billions of dollars of COVID-19 grant funding. Furthermore, this provided a consolidated image across program activities for the first time.
