TIBCO Platform - Developer Portal

Overview

Recent studies by Deloitte have highlighted eight key trends reshaping government in 2024 and beyond. These trends are essential for achieving a “10X” government, focusing on significant improvements across various areas. To thrive, governments must enhance their agility and boost productivity simultaneously. This blend of agility and productivity is vital for driving substantial advancements throughout the governmental landscape.*

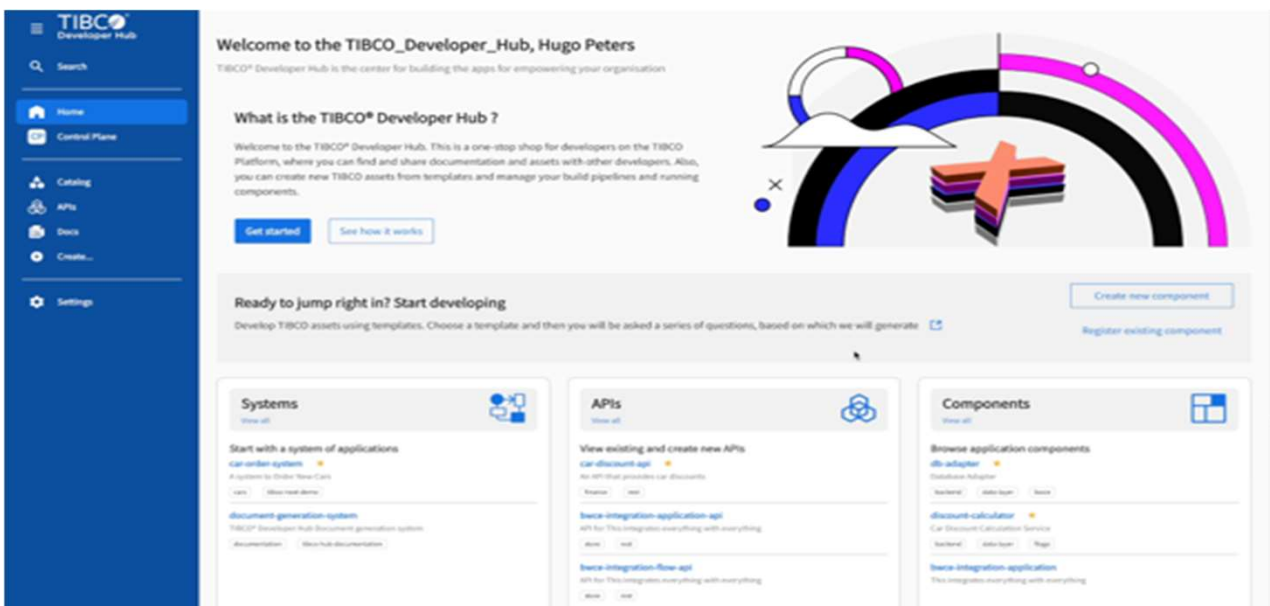

Platform-style hardware and software are crucial in tackling these challenges. By leveraging cloud computing and software solutions that cater to the diverse needs of multiple agencies, governments are rapidly adopting the latest AI and machine learning technologies.

For over a decade, TIBCO has been a pivotal partner in the public sector, empowering agencies to innovate quickly. TIBCO facilitates the integration of multiple data sources, enabling agencies to analyze and act on data that affects both themselves and their partner agencies. This capability enhances productivity and agility, addressing the pressing needs of citizens and military personnel alike.

72% of Federal Executives said that cross-sector collaborations help achieve mission outcomes*

\$500M

saved through a fuel-planning application developed by an agile organization within the US Air Force*

An ecosystem that empowers developers to autonomously manage the entire application lifecycle from development to deployment

How TIBCO Does It

TIBCO recognizes the importance of empowering developers while also fostering an environment where they have greater autonomy. The TIBCO Platform delivers an enhanced user experience designed to accelerate application development and boost productivity. The TIBCO Platform Developer Hub provides a seamless, unified experience, enabling developers to efficiently perform essential tasks and implement changes. Serving as a single point of access, the Developer Hub facilitates collaboration, resource discovery, code management, documentation, and API catalog management. It also offers insights into CI/CD pipelines, test cases, and ensures compliance with enterprise integration standards and security policies, ultimately streamlining workflows and increasing developer productivity.

SPEED

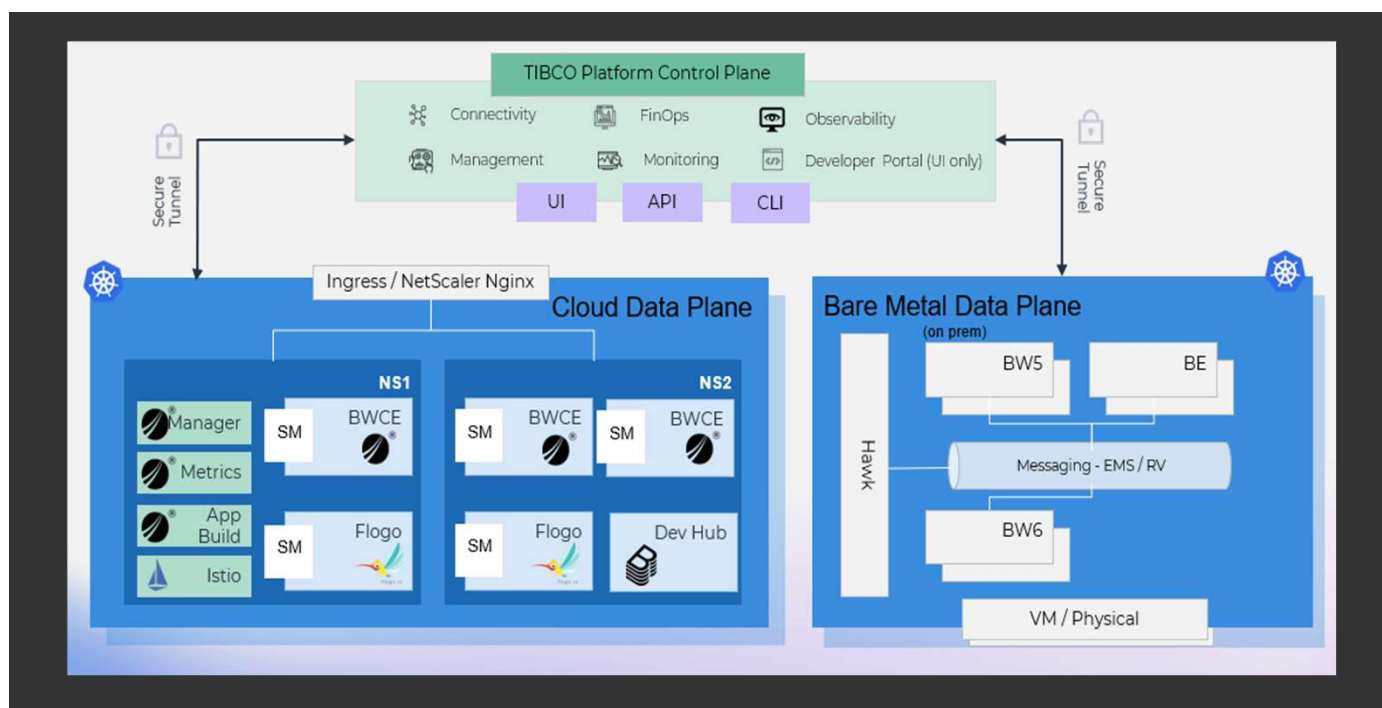

Kick-start your development projects by using pre-built application templates for TIBCO BusinessWorks™ and TIBCO Flogo® Enterprise that adhere to common enterprise integration patterns. Low code application Platform features like a VS Code extension for Flogo can further speed up development of microservices.

DISCOVERABILITY

Centralized Enterprise Asset Repository enables to quickly discover all your TIBCO and non-TIBCO APIs, applications, and documentation in a single location powered by Spotify Backstage. Automatically can generate documentation for new applications with clear code ownership assigned.

DEMAND DRIVEN

Low touch quick-wins may resonate strongly initially but also limits the ability to meet complex use cases or adjust workflows as data and processes evolve over time in your ecosystem. A standout feature of the Developer Hub is the plugin architecture that allows your team to tailor the portal to your specific needs. Also the developer hub can cater multiple personas like developers, Engineers, Product Managers, and virtually everyone in the organization can use to find information and streamline their workflows.
