THE CHALLENGE

AI sprawl is creating risk, not results

- 12% productivity tax — one hour lost daily per employee searching across disconnected tools
- Unmanaged AI tools introduce compliance and security gaps across departments
- No centralized visibility means no governance, no accountability, and no measurable outcomes

THE SOLUTION

One governed AI layer across every tool your teams use

- SOC 2 Type 2, ISO 27001, 27017, 27018, 27701, and 42001 certified — built to enterprise security standards
- SSO and SCIM provisioning built for IT governance from day one — no disruption to existing workflows
- Zero data retention with LLM partners — your organization's content is never used to train AI models

”

IT appreciated that Grammarly supported SSO and SCIM — it made provisioning smooth. Security was a big deal, so knowing it met our compliance standards was key.

Eugene Mejia, Chief of Emerging Technology, Town of Gilbert, AZ
