

Affordable, Secure and Compliant Storage for Body and Dashboard Camera Video

Industry's Lowest-Priced and Highest-Performing Cloud Storage Solution

Across the world, law enforcement agencies are adopting body-worn cameras and in-car video systems to enhance policing, improve public safety, and extend and preserve evidence. While body and dash camera footage is critical for solving crimes and prosecuting cases, maintaining massive volumes of video data is a significant challenge for many police departments.

Body and dash camera programs can easily generate 10,000s of hours of video every week. All that footage must be securely stored and easily accessible for Freedom of Information Act requests and for use in ongoing investigations. And it must be tagged, preserved for trial, archived for extended periods of time and in certain cases retained for perpetuity.

Many departments lack the staff and budget required to retain video evidence in a secure and reliable manner. Traditional on-site data storage systems are notoriously expensive and complicated to deploy, scale and manage. They require significant upfront capital investments, pricey maintenance contracts and specially trained IT staff. First-generation cloud storage services like Amazon Simple Storage Service (S3) eliminate equipment expense and complexity, but are still too costly and complicated for many cities and towns.
