case study

Why This Bank Chose Rally Over Jira to Power Scaled Agile Delivery

This Large Financial Firm needed a new way of working to align 8,000+ engineers across 750+ squads. Their goal: improve predictability, reduce waste, and bring visibility to delivery across the enterprise.

THE CHALLENGE

Their legacy delivery approach led to inefficient work, misaligned priorities, and limited visibility. Teams often started work prematurely, pulling resources away from higher-value initiatives. Existing tools were designed for small teams and failed to scale.

KEY OUTCOMES

- Stopped low-value work earlier
- Increased focus on business outcomes
- Created real-time transparency across delivery
- Enabled aligned decision-making across business and tech leaders

THE SOLUTION: RALLY

They implemented a delivery model called “Progressive Elaboration” and chose Rally to support it. Rally’s enterprise-grade architecture gave them:

- Standardized data model for fast onboarding and scale
- Real-time transparency across domains and teams
- Executive dashboards with actionable insights
- Built-in support for scaled agile delivery

WHY RALLY OVER JIRA?

“Rally had a standard data model that allowed us to quickly onboard teams and see delivery clearly and predictably. No other tool could meet this need.”

- Chief Engineer
